Topographic Mapping John N. Hatzopoulos, Despina J. Hatzopoulos, 2024-10-01 This book is addressed to students and professionals and it is aimed to cover as much as possible the broader region of topographic mapping as it has evolved into a modern field called geospatial information science and technology More emphasis is placed on using scientific methods and tools materialized in algorithms and software to produce practical results For this reason beyond the written material there are also many educational and professional software programs written by the first author to help comprehend the individual methodologies developed The Target of this book is to provide the people who work in fields of applications of topographic mapping environment geology geography cartography engineering geotechnical agriculture forestry geointelligence etc a source of knowledge for the broader region so that to help them in facing relevant problems as well as in preparing contracts and specifications for such type of work assigned to professionals and evaluating such contracting results It also aims to be a reference for theory and practice for professionals in Topographic Mapping This book applies a didactics method where with a relatively small effort someone can digest a large volume of simple or complicated knowledge material at a desirable scientific depth within a relatively short time interval The objective that educated people must be smarter than the machine and not treat the machine as a black box being button pushers has been achieved through the first author's experience in the USA and Greece with relative success by adopting this didactics technique There are 14 chapters including Reference systems and Projections Topographic instruments and Geometry of coordinates Conventional construction of a topographic map Design and reproduction of a thematic map Digital Topographic mapping GIS Digital Terrain Models DTM DEM GPS GNSS methods of Photogrammetry Remote Sensing new technologies LIDAR IFSAR Augmented reality Mapping with UAS UAV Drones the method of Least Squares adjustment and Description of educational software accompanying the text

Measurement and Recording of Historic Buildings Peter Swallow, Ross

Dallas, Sophie Jackson, David Watt, 2016-04-01 Now in its second edition this book provides a practical guide to measured building surveys with special emphasis on recording the fabric of historic buildings. It includes two new chapters dealing with modern survey practice using instruments and photographic techniques as well as a chapter examining recording methods as used on a specific project case study undertaken by the Museum of London Archaeology Service. Measured surveys for producing accurate scaled drawings of buildings and their immediate surroundings may be undertaken for a variety of reasons. The principal ones are to provide a historic record and to form the base drawings upon which a proposed programme of works involving repairs, alterations, adaptations or extensions can be prepared. This book provides a practical guide to preparing measured surveys of historic buildings with special emphasis on recording the fabric. The text assumes little previous knowledge of surveying and begins by describing basic measuring techniques before introducing elementary surveying and levelling. From these principles the practices and techniques used to measure and record existing buildings are developed in a detailed step by step approach covering sketching, measuring, plotting and drawing presentation. For this new edition the text on hand survey methods has been revised to note where new techniques and equipment can be incorporated as well as explaining where more advanced survey methods may be best used to advantage. Information on locating early maps and plans, aerial photography and its uses, documentary research, procurement of surveys and conventional photography has been incorporated at various points as appropriate. In addition, Ross Dallas provides two new chapters dealing with modern survey practice using instruments and photographic techniques. Also the opportunity has been taken to present a wider view of building recording projects by including a new chapter from the Museum of London Archaeological Service MoLAS building recording team. It encompasses their five key principles for recording within an illustrative case study.
