Social Evolution and Inclusive Fitness Theory James A.R. Marshall, 2019-01-08 Social behavior has long puzzled evolutionary biologists since the classical theory of natural selection maintains that individuals should not sacrifice their own fitness to affect that of others Social Evolution and Inclusive Fitness Theory argues that a theory first presented in 1963 by William D Hamilton inclusive fitness theory provides the most fundamental and general explanation for the evolution and maintenance of social behavior in the natural world James Marshall guides readers through the vast and confusing literature on the evolution of social behavior introducing and explaining the competing theories that claim to provide answers to questions such as why animals evolve to behave altruistically Using simple statistical language and techniques that practicing biologists will be familiar with he provides a comprehensive yet easily understandable treatment of key concepts and their repeated misinterpretations Particular attention is paid to how more realistic features of behavior such as nonadditivity and conditionality can complicate analysis Marshall highlights the general problem of identifying the underlying causes of evolutionary change and proposes fruitful approaches to doing so in the study of social evolution Social Evolution and Inclusive Fitness Theory describes how inclusive fitness theory addresses both simple and complex social scenarios the controversies surrounding the theory and how

experimental work supports the theory as the most powerful explanation for social behavior and its evolution **Beyond the Skills Gap** Matthew T. Hora, 2019-01-02 2018 Frederic W Ness Book Award AAC U How can educators ensure that young people who attain a postsecondary credential are adequately prepared for the future Matthew T Hora and his colleagues explain that the answer is not simply that students need more specialized technical training to meet narrowly defined employment opportunities *Beyond the Skills Gap* challenges this conception of the skills gap highlighting instead the value of broader twenty first century skills in postsecondary education They advocate for a system in which employers share responsibility along with the education sector to serve the collective needs of the economy society and students Drawing on interviews with educators in two and four year institutions and employers in the manufacturing and biotechnology sectors the authors demonstrate the critical importance of habits of mind such as problem solving teamwork and communication They go on to show how faculty and program administrators can create active learning experiences that develop students skills across a range of domains The book includes in depth descriptions of eight educators whose classrooms exemplify the effort to blend technical learning with the cultivation of twenty first century habits of mind The study set in Wisconsin takes place against the backdrop of heated political debates over the role of public higher education This thoughtful and nuanced account enriched by keen observations of postsecondary instructional practice promises to contribute new insights to the rich literature on workforce development and to provide valuable guidance for postsecondary faculty and administrators

Science, Society and the Environment Michael R. Dove, Daniel M. Kammen, 2015-04-24 In an era when pressing environmental problems make collaboration across the divide between sciences and arts and humanities essential this book presents the results of a collaborative analysis by an anthropologist and a physicist of four key junctures between science society and environment The first focuses on the systemic bias in science in favour of studying esoteric subjects as distinct from the mundane subjects of everyday life the second is a study of the fire climax grasslands of Southeast Asia especially those dominated by *Imperata cylindrica* sword grass the third reworks the idea of moral economy applying it to relations between environment and society and the fourth focuses on the evolution of the global discourse of the culpability and responsibility of climate change The volume concludes with the insights of an interdisciplinary perspective for the natural and social science of sustainability It argues that failures of conservation and development must be viewed systemically and that mundane topics are no less complex than the more esoteric subjects of science The book addresses a current blind spot within the academic research community to focusing attention on the seemingly common and mundane beliefs and practices that ultimately play the central role in the human interaction with the environment This book will benefit students and scholars from a number of different academic disciplines including conservation and environment studies development studies studies of global environmental change anthropology geography sociology politics and science and technology studies
