## (a) Lamarck's view

Original, short-necked ancestor

Keeps stretching neck to reach leaves higher up on tree

And continues stretching until neck becomes progressively longer

Long-necked descendant after many generations

## (b) The Darwin-Wallace view

Original group exhibiting variation in neck length

Natural selection favors longer necks

The favored characteristic is passed on to next generation in greater proportion than the shorter neck

After many, many generations, group is still variable, but showing a general increase in neck length
