Doomed Interventions Kim Yi Dionne,2018 This book is for students and scholars studying political economy public policy and global health and all those who are interested in knowing how ordinary Africans think about the response to the AIDS epidemic It studies the divergent priorities of donors and citizens in response to AIDS intervention in Africa

Unlocking the Lower Skies Aiga Stokenberga, Maria Catalina Ochoa,2021-06-08 This book explores the economic and broader societal rationale for using unmanned aerial vehicle UAV or drone technologies as a complement to the current transport and logistics systems in several use cases in East Africa The specific use cases examined include medical goods deliveries food aid delivery land mapping and risk assessment agriculture and transport and energy infrastructure inspection Across these applications the case for using UAVs is examined within the context of logistics objectives total operating costs speed availability and flexibility as well as human or societal objectives In the public health use case as more low and middle income countries explore opportunities to improve efficiency and performance in their health supply chains and diagnostics networks they face myriad choices about how best to use UAVs to improve product availability and public health outcomes and to reach the last mile The high level findings from this analysis are that if examining commodity categories individually and looking exclusively at costs delivery with UAVs in general is still more expensive for most categories Although the cost is still higher the most cost effective use case examples include the transport of laboratory samples to selected destinations and delivery of life saving items and blood However layering several use cases can provide efficiencies and cost savings by allocating fixed costs across a greater number of flights and maximizing capacity and time utilization From the perspective of public decision makers the cost effectiveness of UAVs cannot be analyzed without looking at the public health benefits which may be substantial Drone application in the other use cases examined in this book such as mapping risk assessment and agriculture is relatively more common than cargo drone operations and the existing pilot initiatives in East Africa have delivered impressive results for speed and quality precision Food aid delivery by drones is still mostly at a planning rather than

implementation stage Drone applications are rapidly evolving and several use cases could gain impact and scale over the coming years
