## **Monocultures Mind Perspectives Biodiversity Biotechnology:**

Monocultures of the Mind Vandana Shiva, 1993-02 Vandana Shiva has established herself as a leading independent thinker and voice for the South in that critically important nexus where questions of development strategy the environment and the position of women in society coincide In this new volume she brings together her thinking on the protection of biodiversity the implications of biotechnology and the consequences for agriculture of the global pre eminence of Western style scientific knowledge In lucid and accessible fashion she examines the current threats to the planet s biodiversity and the environmental and human consequences of its erosion and replacement by monocultural production She shows how the new Biodiversity Convention has been gravely undermined by a mixture of diplomatic dilution during the process of negotiation and Northern hi tech interests making money out of the new biotechnologies She explains what these technologies involve and gives examples of their impact in practice She questions their claims to improving natural species for the good of all and highlights the ethical and environmental problems posed Underlying her arguments is the view that the North s particular approach to scientific understanding has led to a system of monoculture in agriculture a model that is not being foisted on the South displacing its societies ecologically sounder indigenous and age old experiences of truly sustainable food cultivation forest management and animal husbandry This rapidly accelerating process of technology and system transfer is impoverishing huge numbers of people disrupting the social systems that provide them with security and dignity and will ultimately result in a sterile planet in both North and South In a policy intervention of potentially great significance she calls instead for a halt at international as well as local level to the aid and market incentives to both large scale destruction of habitats where biodiversity thrives and the introduction of centralised homogenous systems of cultivation

**Special Reference Briefs**, 1983      *Food and Agricultural Biotechnology in Ethical Perspective* Paul B.

Thompson, 2020-11-09 This 3rd edition of *Food and Agricultural Biotechnology in Ethical Perspective* updates Thompson s analysis to reflect the next generation of biotechnology including synthetic biology gene editing and gene drives The first two editions of this book published as *Food Biotechnology in Ethical Perspective* in 1997 and 2007 were the first comprehensive philosophical studies of genetic engineering applied to food systems The book is structured with chapter length treatments of risk in four categories food safety to animals to the environment and socio economic risks These chapters are preceded by two chapters providing orientation to the uses of gene technology in food and agriculture and to the goals methods and background assumptions of technological ethics There is also a chapter covering all four types of risk as applied to the first US technology recombinant bovine somatotropin The last four chapters take up 1 intellectual property debates 2 religious metaphysical and intrinsic objections to biotechnology 3 issues in risk and trust and 4 a review of ethical issues in synthetic biology gene editing and gene drives the three key technologies that have emerged since the book was last revised

*Biological Diversity* L. N. Petrov, 2003 One of the cornerstones of life s wonders is the vast array of species filling the

planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life s variety

**The Use of Biodiversity in International Law** Andreas Kotsakis, 2021-05-05 This book presents a legal genealogy of biodiversity of its strategic use before and after the adoption of the Convention on Biological Diversity 1993 This history of genetic gold details how with the aid of international law the idea of biodiversity has been instrumentalized towards political and economic aims A study of the strategic utility of biodiversity rather than the utility of its protection under international law the book s focus is not therefore on the sustainable or non sustainable use of biodiversity as a natural resource but rather on its historical use as an intellectual resource Although biodiversity is still not being effectively conserved nor sustainably used the Convention on Biological Diversity and its parent regime persists now after several decades of operation This book provides the comprehensive answer to the question of the convention s continued existence Drawing from environmental history the philosophy of science political economy and development studies this book will be of interest to advanced undergraduate and postgraduate students in Environmental Law International Law Environmental Studies and Ecology

Gary Bryner, *The Historical Dictionary of Environmentalism* strategically skips across issues concepts time organizations and cultures not with any pretense of producing a definitive dictionary but rather with the aim of producing an inclusive wide ranging and global history of environmentalism This is done through a chronology a list of acronyms and abbreviations an introductory essay and over 300 cross referenced dictionary entries

**Food Biotechnology in Ethical Perspective** Paul B. Thompson, 2007-05-05 Agrifood biotechnology the genetic transformation of plants and animals through recombinant means has created controversy in the food system for more than twenty years This thoroughly revised and amended edition of Paul B Thompson s path breaking study of ethical and philosophical issues raised by this technology up to date The original 1997 edition was the first book length treatment by a philosopher to focus on food and agricultural biotechnology covering ethical issues associated with risk assessment labelling animal transformation patents and the impact of biotechnology on traditional farming communities in both the developed and

developing world The new edition reflects lessons from the hotly contested debates over those issues in the intervening decade and includes wholly new discussions on ethical issues associated with livestock cloning the Precautionary Principle and the transatlantic debate between United States and European perspectives on biotechnology Thompson s unique and insightful approach to addressing the risks and questions of public acceptability associated with novel technology stands as a model for anyone interested in technological innovation and social change The book should be of interest to scholars and citizens interested in the Internet or nanotechnology while it remains an essential resource for understanding the twists and turns of debate over the role of molecular genetics in the transformation of the global food system I Think Therefore I Eat

Martin Cohen,2018-11-13 The worst thing about food science the elephant in the room is that it s not just the opinions that are changing but the facts themselves shift too Did you know that the great philosophers were the original foodies To eat or not to eat That s an easy question to answer But what to eat That s a deep and profoundly difficult one Doctors and nutritionists often disagree with each other while celebrities and scientists keep pitching us new recipes and special diets No one thought to ask the philosophers those rational souls devoted to truth ethics and reason what they think Until now

*Culture and the Changing Environment* Michael J. Casimir, 2009 Today human ecology has split into many different sub disciplines such as historical ecology political ecology or the New Ecological Anthropology The latter in particular has criticised the predominance of the Western view on different ecosystems arguing that culture specific world views and human environment interactions have been largely neglected However these different perspectives only tackle specific facets of a local and global hyper complex reality In bringing together a variety of views and theoretical approaches these especially commissioned essays prove that an interdisciplinary collaboration and understanding of the extreme complexity of the human environment interface is possible

**The Global Food Economy** Tony Weis, 2008-12-08 The Global Food Economy examines the human and ecological cost of what we eat The current food economy is characterized by immense contradictions Surplus food mountains bountiful supermarkets and rising levels of obesity stand in stark contrast to widespread hunger and malnutrition Transnational companies dominate the market in food and benefit from subsidies whilst farmers in developing countries remain impoverished Food miles mounting toxicity and the ecological hoofprint of livestock mean that the global food economy rests on increasingly shaky environmental foundations This book looks at how such a system came about and how it is being enforced by the WTO Ultimately Weis considers how we can find a way of building

socially just ecologically rational and humane food economies      **Earth Governance** Klaus Bosselmann, 2015-07-31 The predicament of uncontrolled growth in a finite world puts the global commons such as oceans atmosphere and biosphere at risk So far states have not found the means to protect what essentially is outside their jurisdiction However the ju
