Monster of God: The Man-Eating Predator in the Jungles of History and the Mind David Quammen, 2004-09-17

Rich detail and vivid anecdotes of adventure A treasure trove of exotic fact and hard thinking New York Times Book Review For millennia lions tigers and their man eating kin have kept our dark scary forests dark and scary and their predatory majesty has been the stuff of folklore But by the year 2150 big predators may only exist on the other side of glass barriers and chain link fences Their gradual disappearance is changing the very nature of our existence We no longer occupy an intermediate position on the food chain instead we survey it invulnerably from above so far above that we are in danger of forgetting that we even belong to an ecosystem Casting his expert eye over the rapidly diminishing areas of wilderness where predators still reign the award winning author of *The Song of the Dodo* and *The Tangled Tree* examines the fate of lions in India's Gir forest of saltwater crocodiles in northern Australia of brown bears in the mountains of Romania and of Siberian tigers in the Russian Far East In the poignant and troublesome ferocity of these embattled creatures we recognize something primeval deep within us something in danger of vanishing forever *Annual Report* University of Minnesota. Ames, 2006-07-01 Since the late 1970s household archaeology has become a key theoretical and methodological framework for research on the development of permanent social inequality and complexity as well as for understanding the social political and economic organization of chiefdoms and states This volume is the cumulative result of more than a decade of research focusing on household archaeology as a means to gain understanding of the evolution of social complexity regardless of underlying economy **Unexplained Phenomena** John Michell, Bob Rickard, Robert J. M. Rickard, 2000 *The Rough Guide to Unexplained Phenomena* is an exploration of the zone that lies between the known and the unknown a shadowy territory that's home to lake monsters combusting people teleporting frogs and man eating trees Taking a Fortean path between dogmatic scientists and credulous believers the authors trace tales of wonder back to their sources drawing from a huge archive of observations opinions and discussions As the third millennium begins many things are not yet known or understood about our world as this Rough Guide shows there are still many riddles to solve and wonders to experience *Historical Incidence of the Larger Land Mammals in the Broader Eastern Cape* Cuthbert John Skead, 2007 Bigfoot Exposed David J. Daegling, 2004-10-17 In *Bigfoot Exposed* biological anthropologist and primate physiology specialist David J. Daegling objectively examines the northwest American

myth of Bigfoot Using scientific methodology Daegling systematically and persuasively repudiates the evidence purportedly demonstrating the creature's existence and ultimately concludes that Bigfoot exists only in the popular imagination

Environment Abstracts, 1984 **Wild Articulations** Timothy Neale, 2017-07-31 Beginning with the nineteenth century expeditions Northern Australia has been both a fascination and concern to the administrators of settler governance in Australia With Southeast Asia and Melanesia as neighbors the region's expansive and relatively undeveloped tropical savanna lands are alternately framed as a market opportunity an ecological prize a threat to national sovereignty and a social welfare problem Over the last several decades while developers have eagerly promoted the mineral and agricultural potential of its monsoonal catchments conservationists speak of these same sites as rare biodiverse habitats and settler governments focus on the social dysfunction of its Indigenous communities Meanwhile across the north Indigenous people have sought to wrest greater equity in the management of their lives and the use of their country In *Wild Articulations* Timothy Neale examines environmentalism indigeneity and development in Northern Australia through the controversy surrounding the Wild Rivers Act 2005 Qld in Cape York Peninsula an event that drew together a diverse cast of actors traditional owners prime ministers politicians environmentalists mining companies the late Steve Irwin crocodiles and river systems to contest the future of the north With a population of fewer than 18 000 people spread over a landmass of over 50 000 square miles Cape York Peninsula remains a frontier in many senses Long constructed as a wild space whether as terra nullius a zone of legal exception or a biodiverse wilderness region in need of conservation Australia's north has seen two fundamental political changes over the past two decades The first is the legal recognition of Indigenous land rights reaching over a majority of its area The second is that the region has been the center of national debates regarding the market integration and social normalization of Indigenous people attracting the attention of federal and state governments and becoming a site for intensive neoliberal reforms Drawing connections with other settler colonial nations such as Canada and Aotearoa New Zealand *Wild Articulations* examines how indigenous lands continue to be imagined and governed as wild *Soundings* Doreen Cunningham, 2022-07-12 A gorgeous journey You will be glad you've joined her Susan Orlean author of *On Animals* and *The Library Book* In this lyrical memoir of motherhood love and resilience that captures rarely observed natural places San Francisco Chronicle a woman and her toddler son follow the grey whale migration from Mexico to northernmost Alaska In this striking brave and often lyrical *The Guardian* blend of nature writing whale science and memoir Doreen Cunningham interweaves two stories tracking the extraordinary northward migration of the grey whales with a mischievous toddler in tow and living with an Iupiaq family in Alaska seven years earlier A story of courage and resilience *Soundings* is about the migrating whales and all we can learn from them as they mother adapt and endure their lives interrupted and threatened by global warming It is also a riveting journey onto the Arctic Sea ice and into the changing world of Indigenous whale hunters where Doreen becomes immersed in the ancient values of the Iupiaq whale hunt and falls in love Big hearted brave and

fearlessly honest Soundings is an unforgettable journey **Explorations in Ecocriticism** Paul Lindholdt,2015-04-09 A chief innovation of Explorations in Ecocriticism is to push ecological criticism beyond its focus on literary studies to engage with other arts and culture One chapter closely examines the pictures commissioned by the U S Bureau of Reclamation to valorize its big dam projects Previously no one has written about the large art collection that toured the nation under the auspices of the Smithsonian in the early 1970s when the Bureau of Reclamation was under fire and new environmental regulations were becoming law Another chapter An Iconography of Sabotage previously published in France as part of a Paris symposium looks at the pictorial dimension of saboteurs throughout American history with a special emphasis on the IWW and Earth First The book draws extensively on the social sciences Ecology and environment are treated too often as technical topics that go over the heads of lay readers Many Americans care about air and water quality the extinction of species and the unfortunate politicization of science But they also find the discourse daunting the details exceedingly complex By leavening such heavy subjects with current events Explorations in Ecocriticism makes environmental issues accessible to lay readers and offers routes to sustainability in the United States today [Index to Ecology \(multimedia\)](#).

National Information Center for Educational Media,1971 *Encyclopedia of Cryptozoology* Michael Newton,2016-10-05 On every continent and in every nation animals unrecognized by modern science are reported on a daily basis People passionately pursue these creatures the name given to their field of study is cryptozoology Coined in the 1950s the term literally means the science of hidden animals When the International Society of Cryptozoology ISC was formed in 1982 the founders declared that the branch of science is also concerned with the possible existence of known animals in areas where they are not supposed to occur either now or in the past as well as the unknown persistence of presumed extinct animals to the present time or to the recent past what makes an animal of interest to cryptology is that it is unexpected This reference work presents a flesh and blood view of cryptozoology Here 2 744 entries are listed the majority of which each describe one specific creature or type of creature Other entries cover 742 places where unnamed cryptids are said to appear profiles of 77 groups and 112 individuals who have contributed to the field descriptions of objects and events important to the subject and essays on cryptotourism and hoaxes for example Appendices offer a timeline of zoological discoveries annotated lists of movies and television series with cryptozoological themes a list of crypto fiction titles and a list of Internet websites devoted to cryptozoology *Evolving Tomorrow* Asher D. Humans and Hyenas Keith Somerville,2021-03-18 Humans and Hyenas examines the origins and development of the relationship between the two to

present an accurate and realistic picture of the hyena and its interactions with people. The hyena is one of the most maligned misrepresented and defamed mammals. It is still despite decades of research led knowledge seen as a skulking cowardly scavenger rather than a successful hunter with complex family and communal systems. Hyenas are portrayed as sex shifting deviants grave robbers and attackers of children in everything from African folk tales through Greek and Roman accounts of animal life to Disney's *The Lion King* depicting hyenas with a lack of respect and disgust despite the reality of their behaviour and social structures. Combining the personal in depth mining of scientific papers about the three main species and historical accounts Keith Somerville delves into our relationship with hyenas from the earliest records from millennia ago through the accounts by colonisers to contemporary coexistence where hyenas and humans are forced into ever closer proximity due to shrinking habitats and loss of prey. Are hyenas fated to retain their bad image or can their amazing ability to adapt to humans more successfully than lions and other predators lead to a shift in perspective? This book will be of great interest to students and scholars in the environmental sciences conservation biology and wildlife and conservation issues.
