Johnson, 2017-09-08 Macroeconomics is an outgrowth from the main stream of classical monetary theory following Keynes Keynes changed the emphasis from determination of the level of money prices to determination of the level of output and employment He also changed the key relationship from demand and supply of money as determining the price level to the relationship between consumption expenditure and income in conjunction with private investment expenditure as determining the level of output and therefore employment demanded The income multiplier replaced the velocity of circulation as the key concept of monetary theory The tendency of the past twenty five years has been to reintegrate Keynesian and classical monetary theory into one general system of analysis Moreover as inflation has succeeded mass

unemployment as a major policy problem interest in classical monetary theory has revived while Keynesians have increasingly emphasized the monetary aspects of Keynesian theory The proper contemporary distinction is not between two separate branches of economic theory but between two areas of application or contexts of the theory of rational maximizing behavior In the one the microeconomic context it is assumed either that the overall workings of the economic system can be disregarded or that the macroeconomic relationships are in full general equilibrium In the other the macroeconomic context it is assumed that the maximizing decisions of individual economic units firms and households will not necessarily add up to a macroeconomic equilibrium but will produce a disequilibrium situation that will in the course of time produce changes in the individual decisions
