Monsoons over China Ding Yihui, 2013-03-09 The monsoon over China is one of the major components of the general circulation on a global basis Its activity bears a significant regional implication in East Asia and Southeast Asia Recently the remarkable relationship and teleconnection between this part of the monsoon and other regions over the world have been revealed However little of the overall picture of monsoons over China is known by meteorologists in English speaking countries This monograph provides the first opportunity to extensively introduce this subject and give a comprehensive and systematic description of the major aspects of monsoons over China with a special emphasis on the fluctuations of the monsoon on various scales and the effects of the Tibetan Plateau on the monsoon Much highly original material and achievements Chinese and Western meteorologists have made from the past 20 years have been incorporated with a unifying approach In each chapter the observational and theoretical including modelling treatment will be closely combined in order to fully illustrate the relevant problems The unique thermal and dynamical effects of the Tibetan Plateau on the monsoon circulation features which are one of the central problems of the Asian monsoon are highlights of this monograph Researchers in meteorology and weather forecasters should find this book a very useful introduction to monsoons over China not only for its systematic treatment of the subject but also because of its considerable historical information This monograph is equally suitable for graduates or more advanced students in meteorology hydrology and oceanography The Bulletin of the Central Meteorological Observatory of Japan Tōkyō Kanku Kishōdai, 1910 **Special Publication** United States.
