

In our new picture, there is no coordinate system [that] is inertial everywhere, i.e. in which $d^2x^i/d\tau^2 = 0$ for every particle for which $d\tilde{U}/d\tau = 0$. Therefore we have to allow all coordinates on an equal footing.

Bernard Schutz, §7.3

It might help to tackle the supplementary problems first, see §7.2 below.

7.1 Exercises

7.1 (i) If

$$(nU^\alpha)_{;\alpha} = q R, \quad \text{Schutz Eq. (7.3)} \quad (7.1)$$

were the correct generalization of Schutz Eq. (7.1), $(nU^\alpha)_{;\alpha} = 0$, to a curved spacetime, how would you interpret it? (ii) What would happen to the number of particles in a co-moving volume of fluid, as time evolves? (iii) In principle, can we distinguish experimentally between

$$(nU^\alpha)_{;\alpha} = 0, \quad \text{Schutz Eq. (7.2)} \quad (7.2)$$

and eqn. (7.1)?

Solution

(i) Recall that in the hypothetical eqn. (7.1) q was some constant and R the Ricci scalar. Based on kinematics, this equation states that, for $q > 0$ there would be a source of particles for positively curved space $R > 0$. This was shown in the solution to Exercise 4.20(a) above, which interpreted the divergence of the four-vector $N = n\tilde{U}$ as the rate of generation of particles per unit volume. If (qR) were negative there would be a sink of particles. Curvature of spacetime would somehow create or destroy particles.

(ii) What would happen to the number of particles in a co-moving volume of fluid, as time evolves?

First Course In General Relativity Solution Manual:

A Student's Manual for A First Course in General Relativity Robert B. Scott, 2016-01-21 This comprehensive student manual has been designed to accompany the leading textbook by Bernard Schutz *A First Course in General Relativity* and uses detailed solutions cross referenced to several introductory and more advanced textbooks to enable self learners undergraduates and postgraduates to master general relativity through problem solving The perfect accompaniment to Schutz's textbook this manual guides the reader step by step through over 200 exercises with clear easy to follow derivations It provides detailed solutions to almost half of Schutz's exercises and includes 125 brand new supplementary problems that address the subtle points of each chapter It includes a comprehensive index and collects useful mathematical results such as transformation matrices and Christoffel symbols for commonly studied spacetimes in an appendix Supported by an online table categorising exercises a Maple worksheet and an instructors manual this text provides an invaluable resource for all students and instructors using Schutz's textbook

300 Problems in Special and General Relativity Mattias Blennow, Tommy Ohlsson, 2021-12-09 Einstein's theories of special relativity and general relativity form a core part of today's undergraduate or Masters level physics curriculum This is a supplementary problem book or student's manual consisting of 150 problems in each of special and general relativity The problems which have been developed tested and refined by the authors over the past two decades are a mixture of short form and multi part extended problems with hints provided where appropriate Complete solutions are elaborated for every problem in a different section of the book some solutions include brief discussions on their physical or historical significance Designed as a companion text to complement a main relativity textbook it does not assume access to any specific textbook This is a helpful resource for advanced students for self study a source of problems for university teaching assistants or as inspiration for instructors and examiners constructing problems for their lectures homework or exams

Problems and Solutions on Vector Spaces for Physicists Robert B. Scott, 2023-08-09 This book offers supporting material for the comprehensive textbook *Mathematical Physics A Modern Introduction to Its Foundations* authored by Sadri Hassani The book covers mathematical preliminaries and all of Part I in Hassani's textbook The subjects covered here include the key topics necessary for physicists to form a solid mathematical foundation vectors and linear maps algebras operators matrices and spectral decomposition In particular the vector space concept is a central unifying theme in later chapters of Hassani's textbook Detailed solutions are provided to one third of the end of chapter exercises in the first six chapters of his text The present volume helps upper undergraduate and early postgraduate physics students deepen their understanding of the mathematics that they encounter in physics learn physics more efficiently and use mathematics with more confidence and creativity The content is thus presented rigorously but remains accessible to physics students New exercises are also proposed some with solutions some without so that the total number of unsolved exercises remains unchanged They are chosen to help explain difficult concepts amplify key points in

Hassani's textbook or make further connections with applications in physics Taken together with Hassani's work the two form a self contained set and the solutions make detailed reference to Hassani's text The solutions also refer to other mathematics and physics textbooks providing entry points to further literature that finds a useful place in the physicist's personal library
