Evaluating Teaching and Learning David Kember, Paul Ginns, 2012-03-12 Every semester colleges and universities ask students to complete innumerable course and teaching evaluation questionnaires to evaluate the learning and teaching in courses they have taken. For many universities it is a requirement that all courses be evaluated every semester. The laudable rationale is that the feedback provided will enable instructors to improve their teaching and the curriculum thus enhancing the quality of student learning. In spite of this there is little evidence that it does improve the quality of teaching and learning. Ratings only improve if the instruments and the presentation of results are sufficiently diagnostic to identify potential improvements and there is effective counselling. *Evaluating Teaching and Learning* explains how evaluation can be more effective in enhancing the quality of teaching and learning and introduces broader and more diverse forms of evaluation. This guide explains how to develop questionnaires and protocols which are valid, reliable and diagnostic. It also contains proven instruments that have undergone appropriate testing procedures together with a substantial item bank. The book looks at the specific national frameworks for the evaluation of teaching in use in the USA, UK and Australia. It caters for diverse methodologies both quantitative and qualitative and offers solutions that allow evaluation at a wide range of levels from classrooms to programmes to departments and entire institutions. With detail on all aspects of the main evaluation techniques and instruments the authors show how effective evaluation can make use of a variety of approaches and combine them into an effective project. With a companion website which has listings of the questionnaires and item bank this book will be of interest to those concerned with organising and conducting evaluation in a college, university, faculty or department. It will also appeal to those engaged in the scholarship of teaching and learning.

Teaching and Learning of Fluid Mechanics Ashwin Vaidya, 2020-12-02 This book contains research on the pedagogical aspects of fluid mechanics and includes case studies, lesson plans, articles on historical aspects of fluid mechanics and novel and interesting experiments and theoretical calculations that convey complex ideas in creative ways. The current volume showcases the teaching practices of fluid dynamicists from different disciplines ranging from mathematics, physics, mechanical engineering and environmental engineering to chemical engineering. The suitability of these articles ranges from early undergraduate to

graduate level courses and can be read by faculty and students alike We hope this collection will encourage cross disciplinary pedagogical practices and give students a glimpse of the wide range of applications of fluid dynamics Teaching with Classroom Response Systems Derek Bruff, 2009-10-22 There is a need in the higher education arena for a book that responds to the need for using technology in a classroom of tech savvy students This book is filled with illustrative examples of questions and teaching activities that use classroom response systems from a variety of disciplines with a discipline index The book also incorporates results from research on the effectiveness of the technology for teaching Written for instructional designers and re designers as well as faculty across disciplines A must read for anyone interested in interactive teaching and the use of clickers This book draws on the experiences of countless instructors across a wide range of disciplines to provide both novice and experienced teachers with practical advice on how to make classes more fun and more effective Eric Mazur Balkanski Professor of Physics and Applied Physics Harvard University and author Peer Instruction A User s Manual Those who come to this book needing practical advice on using clickers in the classroom will be richly rewarded with case studies a refreshing historical perspective and much pedagogical ingenuity Those who seek a deep thoughtful examination of strategies for active learning will find that here as well in abundance Dr Bruff achieves a marvelous synthesis of the pragmatic and the philosophical that will be useful far beyond the life span of any single technology Gardner Campbell Director Academy for Teaching and Learning and Associate Professor of Literature Media and Learning Honors College Baylor University *International Encyclopedia of Education* , 2009-04-17 The field of education has experienced extraordinary technological societal and institutional change in recent years making it one of the most fascinating yet complex fields of study in social science Unequalled in its combination of authoritative scholarship and comprehensive coverage International Encyclopedia of Education Third Edition succeeds two highly successful previous editions 1985 1994 in aiming to encapsulate research in this vibrant field for the twenty first century reader Under development for five years this work encompasses over 1 000 articles across 24 individual areas of coverage and is expected to become the dominant resource in the field Education is a multidisciplinary and international field drawing on a wide range of social sciences and humanities disciplines and this new edition comprehensively matches this diversity The diverse background and multidisciplinary subject coverage of the Editorial Board ensure a balanced and objective academic framework with 1 500 contributors representing over 100 countries capturing a complete portrait of this evolving field A totally new work revamped with a wholly new editorial board structure and brand new list of meta sections and articles Developed by an international panel of editors and authors drawn from senior academia Web enhanced with supplementary multimedia audio and video files hotlinked to relevant references and sources for further study Incorporates ca 1 350 articles with timely coverage of such topics as technology and learning demography and social change globalization and adult learning to name a few Offers two content delivery options print and online the latter of which provides anytime anywhere access for multiple

Medical Education in Pulmonary, Critical Care, and Sleep Medicine Patricia A. Kritek, Jeremy B. Richards, 2019-05-14 This is a book for clinician educators. It offers modern evidence based practices to use in teaching learners at a range of levels with an emphasis on concrete strategies that teachers can implement in their own clinical practices as well as in small and large group settings. Medical education is rapidly changing with emerging evidence on best practices and a proliferation of new technologies. As strategies for effectively teaching medical learners evolve, it is important to understand the implications for Pulmonary Critical Care and Sleep Medicine PCCM. This text is structured to allow easy access to the reader. Chapters are organized around level of learner e.g. medical student to PCCM fellow to practicing physicians as well as the location of teaching. Given the variety of clinical settings in which PCCM physicians teach, specific consideration of best practices, broad changes in curricular design and pedagogy are considered in different clinical contexts. Each chapter begins with a focus on why the topic is important for clinician educators. A review of the available evidence and relevant medical education theory about the topic follows, with examples from specific studies that provide insight into best practices regarding the concepts and topics discussed in the chapter. For chapters focusing on learners, different environments are considered, and similarly, if the focus is on the learning environment, attention is paid to the approach to different learners. Each chapter ends with a summary of the primary points from the chapter and concrete examples of how clinician teachers can put the concepts discussed in the chapter into practice. This is an ideal guide for educators in pulmonary critical care and sleep medicine.

Chemistry Education Javier García-Martínez, Elena Serrano-Torregrosa, 2015-05-04 Winner of the CHOICE Outstanding Academic Title 2017 Award. This comprehensive collection of top level contributions provides a thorough review of the vibrant field of chemistry education. Highly experienced chemistry professors and education experts cover the latest developments in chemistry learning and teaching as well as the pivotal role of chemistry for shaping a more sustainable future. Adopting a practice oriented approach, the current challenges and opportunities posed by chemistry education are critically discussed, highlighting the pitfalls that can occur in teaching chemistry and how to circumvent them. The main topics discussed include best practices, project based education, blended learning and the role of technology including e learning and science visualization. Hands on recommendations on how to optimally implement innovative strategies of teaching chemistry at university and high school levels make this book an essential resource for anybody interested in either teaching or learning chemistry more effectively, from experienced chemistry professors to secondary school teachers, from educators with no formal training in didactics to frustrated chemistry students.
