Junior Graphic Mavis Kitcher (Mrs), 2014-06-11 Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This

volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

Bailey Norwood,Pascal A. Oltenacu,Michelle S. Calvo-Lorenzo,Sarah Lancaster,2014-11-05 The world is more interested in issues surrounding agricultural and food issues than ever before Are pesticides safe Should we choose locally grown food Why do some people embrace new agricultural technologies while others steadfastly defend traditional farming methods In the debates about organic food genetically modified organisms and farm animal welfare it s not always clear what the scientific studies are actually telling us To understand these controversies and more the authors of Agricultural and Food Controversies What Everyone Needs to Know begin by encouraging readers to develop an understanding of how two well educated people can form radically different opinions about food Sometimes the disputes are scientific in nature and sometimes they arise from conflicting ethical views This book confronts the most controversial issues in agriculture by first explaining the principles of each side of the debate guiding readers through the scientific literature so that they can form their own educated opinions Questions asked Are organic foods truly better for your health Are chemical fertilizers sustainable or are we producing cheap food at the expense of future generations What foods should we eat to have a smaller carbon footprint Does buying local food stimulate the local economy Why are so many farm animals raised indoors Should antibiotics be given to livestock Is genetically modified food the key to global food security and does it give corporations too much market power Is the prevalence of corn throughout the food system the result of farm subsidies Providing a combination of research and popular opinions on both sides of the issue Agricultural and Food Controversies What Everyone Needs to Know allows readers to decide for themselves what they personally value and believe to be important when it comes to their food
