Goodell, Selma Koç, 2020-09-01 STEM project based instruction is a pedagogical approach that is gaining popularity across the USA. However, there are very few teacher education programs that focus specifically on preparing graduates to teach in project based environments. This book is focused on the UTeach program, a STEM teacher education model that is being implemented across the USA in 46 universities. Originally focused only on mathematics and science, many UTeach programs are now offering engineering and computer science licensure programs as well. This book provides a forum to disseminate how different institutions have implemented the UTeach model in their local context. Topics discussed will include sustainability features of the model and how program assessment, innovative instructional programming, classroom research, and effectiveness research have contributed to its success. The objectives of the book are: To help educators gain insight into a teacher education organizational model focused on STEM and how and why it was developed; To present the theoretical underpinnings of a STEM education model, i.e., deep learning, conceptual understanding; To present innovative instructional programming in teacher education, i.e., project-based instruction, functions and modeling, research methods; To present research and practice in classroom and field implementation and future research recommendations; To disseminate program assessments and improvement efforts.

Building Support for Scholarly Practices in Mathematics Methods Signe E. Kastberg, Andrew M. Tyminski, Alyson E. Lischka, Wendy B. Sanchez, 2017-09-01 *Building Support for Scholarly Practices in Mathematics Methods* is the product of collaborations among over 40 mathematics teacher educators (MTEs) who teach mathematics methods courses for prospective PreK-12 teachers in many different institutional contexts and structures. Each chapter unpacks ways in which MTEs use theoretical perspectives to inform their construction of goals, activities designed to address those goals, facilitation of activities, and ways in which MTEs make sense of experiences prospective teachers have as a result. The book is organized in seven sections that highlight how the theoretical perspective of the instructor impacts scholarly inquiry and practice. The final section provides insight as we look backward to reflect and forward with excitement, moving with the strength of the variation we found in our stories and the feeling of solidarity that results in our understandings of purposes for and insight into teaching mathematics methods. This book can serve as a resource for MTEs as they discuss and construct scholarly practices and as they undertake scholarly inquiry as a means to systematically examine their practice.
