Crawley, 2009-06-22 Plant ecology is the scientific study of the factors influencing the distribution and abundance of plants. This benchmark text extremely well received in its first edition shows how pattern and structure at different levels of plant organization from ecophysiology through population dynamics to community structure and ecosystem function are influenced by abiotic factors eg climate and soils and by biotic factors eg competition and herbivory. Adopting a dynamic approach this book combines descriptive text with theoretical models and experimental data. It will be invaluable reading for both student and practising ecologist alike. In this second edition the structure of the book has been completely revised moving from the small scale to the large scale in keeping with contemporary teaching methods. This fresh approach allows consideration of several new and important topics such as plant secondary chemistry herbivory sex and breeding systems. Additional chapters address topical applied issues in plant ecology including global warming pollution and biodiversity. The latest edition of a very widely adopted textbook. Written by a team of leading experts and edited by an international authority in the field.

Handbook of Teichmüller Theory Athanase Papadopoulos, 2007. This multi volume set deals with Teichmüller theory in the broadest sense namely as the study of moduli space of geometric structures on surfaces with methods inspired or adapted from those of classical Teichmüller theory. The aim is to give a complete panorama of this generalized Teichmüller theory and of its applications in various fields of mathematics. The volumes consist of chapters each of which is dedicated to a specific topic. The volume has 19 chapters and is divided into four parts. The metric and the analytic theory uniformization Weil Petersson geometry holomorphic families of Riemann surfaces infinite dimensional Teichmüller spaces cohomology of moduli space and the intersection theory of moduli space. The group theory quasi homomorphisms of mapping class groups measurable rigidity of mapping class groups applications to Lefschetz fibrations affine groups of flat surfaces braid groups and Artin groups. Representation spaces and geometric structures trace coordinates invariant theory complex projective structures circle packings and moduli spaces of Lorentz manifolds homeomorphic to the product of a surface with the real line. The Grothendieck Teichmüller theory dessins d'enfants Grothendieck's reconstruction principle and the Teichmüller theory of the solenoid. This handbook is an essential reference for graduate students and researchers interested in Teichmüller theory and its ramifications in particular for mathematicians working in topology geometry algebraic geometry dynamical systems and complex analysis. The authors are leading experts in the field.
