Heaney, Robert Pitt, 2000-06-27 The 20th century's automobile inspired land use changes brought about tremendous transformations in how stormwater moves across the modern urban landscape

Streets and parking areas in the average urban family's neighborhood now exceed the amount of land devoted to living space. Add parking office and commercial space and it's easy to understand how modern cities have experienced a three fold increase in impervious areas. Traditional wet weather collection systems removed stormwater from urban areas as quickly as possible often transferring problems downstream. Innovative Urban WetWeather Flow Management Systems does two things. It considers the physical chemical and biological characteristics of urban runoff then describes innovative methods for improving wet weather flow WWF management systems. The result of extensive research Innovative Urban Wet Weather Flow Management Systems looks most at how to handle runoff in developments of the 21st century the conflicting objectives of providing drainage while decreasing stormwater pollutant discharges the impact of urban WWF on surface and groundwater such as smaller urban stream channels scoured by high peak flows sediment transport and the toxic effects of WWF on aquatic organisms the effectiveness of WWF controls including design guidelines and source and downstream controls are an important issue. Innovative Urban Wet Weather Flow Management Systems looks at how source controls like biofiltration created through simple grading may work in newly developing areas while critical source areas like an auto service facilities may need more extensive treatment strategies. Focusing WWF treatment on intensively used areas such as the 20 percent of streets that handle the bulk of the traffic and under utilized parking areas is also considered. Developing a more integrated water supply system collecting treating and disposing of wastewater and handling urban WWF requires innovative methods such as a neighborhood scale system that would recycle treated wastewater and storm water for lawn watering and toilet flushing or use treated roof runoff for potable purposes.

Effect of Smart Growth Policies on Travel Demand Maren Outwater, Colin Smith, Jerry Walters, Brian Welch, Robert Cervero, Kara Kockelman, and J. Richard Kuzmyak, This report from the second Strategic Highway Research Program SHRP 2 which is administered by the Transportation Research Board of the National Academies explores the underlying relationships among households firms and travel demand. The report also describes a regional scenario planning tool that can be used to evaluate the impacts of various smart growth policies.

Rail and the City Roxanne Warren, 2014-09-12 An architect makes the case for rail transit as the critical infrastructure for a fluidly functioning and environmentally sustainable urban society The United States has evolved into a nation of twenty densely populated megaregions Yet despite the environmental advantages of urban density urban sprawl and reliance on the private car still set the pattern for most new development Cars guzzle not only gas but also space as massive acreage is dedicated to roadways and parking Even more pressing the replication of this pattern throughout the fast developing world makes it doubtful that we will achieve the reductions in carbon emissions needed to avoid climate catastrophe In Rail and the City architect Roxanne Warren makes the case for compact urban development that is supported by rail transit Calling the automobile a relic of the twentieth century Warren envisions a release from the tyrannies of traffic congestion petroleum dependence and an oppressively paved environment Technical features of rail are key to its high capacities safety at high speeds and compactness uniquely qualifying it to serve as ideal infrastructure within and between cities Ultimately mobility could be

achieved through extensive networks of public transit particularly rail supplemented by buses cycling walking car sharing and small flexible vehicles High speed rail fed by local transit could eliminate the need for petroleum intensive plane trips of less than 500 miles Warren considers issues of access to transit citing examples from Europe Japan and North America and pedestrian and transit oriented urban design Rail transit she argues is the essential infrastructure for a fluidly functioning urban society *Transportation Planning Handbook* John D. Edwards, Institute of Transportation Engineers, 1992 A reference source on the guidelines and techniques in current practice of transportation planning It covers local and state planning issues parking facility design mass transit and financial and environmental concerns
