making to achieve sustainability goals      External Sector Report, July 2019 International Monetary Fund. Monetary and Capital Markets Department, 2019-07-17 The IMF's 2019 External Sector Report shows that global current account balances stand at about 3 percent of global GDP. Of this, about 35-45 percent are now deemed excessive. Meanwhile, net credit and debtor positions are at historical peaks and about four times larger than in the early 1990s. Short-term financing risks from the current configuration of external imbalances are generally contained as debtor positions are concentrated in reserve currency issuing advanced economies. An intensification of trade tensions or a disorderly Brexit outcome with further repercussions for global growth and risk aversion could however affect other economies that are highly dependent on foreign demand and external financing. With output near potential in most systemic economies, a well-calibrated macroeconomic and structural policy mix is necessary to support rebalancing. Recent trade policy actions are weighing on global trade flows, investment, and growth, including through confidence effects and the disruption of global supply chains with no discernible impact on external imbalances thus far.      *Neural Engineering Techniques for Autism Spectrum Disorder* Ayman S. into adaptive stress responses The transcellular distribution of the ER providing comprehensive cell to cell connections in multicellular organisms probably allows a concerted action of cell alliances and tissue areas towards environmental constraints At the cellular level stress adaptation correlates with the capability of the ER machinery to synthesise proteins participating in stress signalling as well as in the activation of ER membrane localised proteins to start cell protective signalling processes Importantly depending on the stress insult the ER either supports protective strategies or initiates cell death programmes Recent genetic molecular and cell biological studies have drawn an initial picture of underlying signalling events activated by ER membrane localised proteins In this Research Topic we provided a platform for articles describing research on ER morphology and metabolism with a focus on stress translation The Research Topic is sub divided into the following sections 1 ER in stress signalling and adaptation 2 ER structure and biosynthetic functions 3 Regulation of protein processing 4 Regulation of programmed cell death
