

## SSCP Study Guide

Created By: Kathleen Gillette and Makeia Jackson, Teaching Assistants

### Domain 1: Access Control

#### Lesson 1.1: Access Control Concepts (SC)

*Skills Learned from This Lesson: Access control fundamental concepts, Different Types of Access Control*

- Access Control Fundamental Concepts
  - **Object:** A passive entity that contains information.
    - Such as Applications, Data, Systems and Networks
  - **Subject:** An active entity that requests access to an object or data within an object.
    - Authorized and Unauthorized users, Applications, Systems and Networks
    - The Applications and Networks are considered to be both objects and subjects dependent on what they are doing.
  - **How they interact:** The subject is the entity doing the accessing and the Object is that entity that is being accessed or pulled.
- Different Types of Access Control
  - **Discretionary Access Control:** A means of assigning access rights based on rules specified by users.
    - The owner sets the permissions
  - **Rule Set-Based Access Control:** An Access control framework which give data owners that discretion to determine the rules necessary to facilitate access.
    - The subject enters the enforcement area and request access to an object. The enforcement area checks the rules that have been written or constructed by the data owner to determine whether the subject should be granted access. The rules come back with a yes or no and then the enforcement area, will returns with a yes or no to the subject. If it's a yes, the access is granted to the object. If it's a no the subject access is not granted to the object.
  - **Non-Discretionary Access Control:** Controls that can't be changed by users, but they must be changed by the administrator.
