When the pistol's trigger is pulled, the trigger axis is rotated forward together with the trigger bar which engages the hammer. After about 70 degrees rotation, the trigger bar disengages and the hammer rotates forward to strike the firing pin.

The ignited powder gas drives the bullet forward through the barrel and simultaneously drives the slide and barrel backwards. After about $3/16"$ (5 mm) the barrel is cammed down by the assembly pin and releases the slide to travel back extracting the case. On it's way back, the slide is gradually slowed down by the recoil springs.
