

BULKHEAD AND DECK PENETRATION

Any bulkhead penetrations which are opened must be closed and sealed using appropriate materials thus maintaining existing water or fire proofing precautions.

OVERCURRENT PROTECTION DEVICES

All supplies to the system must be fitted with a suitably rated, clearly labelled overprotection device such as a breaker or a fuse.

CABLE BRACKET ASSEMBLY

The SCV-A170 cable bracket assembly used on SCV systems includes two cable clamps that must be used to restrain the cables as demonstrated opposite.

CABLE CLAMP BOLTS

Lightly grease the threads of the four bolts prior to final assembly using the tube of grease provided in the fitting kit.

CONNECTOR ACCESS

Depending on the mounting arrangement, access to the two base plate connectors (LAN & DC input) is restricted when the SCV/ SxV is fully bolted to the mounting plate.

In this situation, it is recommended these connections are correctly fitted and secured *before* the main mounting bolts are fully tightened.

Example of a cable installed in the cable bracket assembly

AC SUPPLIES

Where a mains powered AC to DC Power supply is to be connected to the system (not Kelvin Hughes standard supply), the unit must be designed in accordance with the requirements of IEC 60950-1:2005. This should include provision of a suitable rated overcurrent protective device and a protective earth connection, made to suitable earth point on the mounting platform.

The power supply should be designed in such a way that under single fault conditions mains voltages cannot be applied to its DC output.

MATING/ DE-MATING

The connectors are a keyed Push-Pull latching connector that can only be inserted in one orientation into the correct mating half.

To remove the connectors pull the collar back with minimal force to release the connector, then pull with minimal force. Correct mating and de-mating of the connector requires very little force. If effort is required when connecting or disconnecting connectors, the wrong technique is being employed.
