
- Abstract**

Abstract: This study examined the effects of a 12-week, 3-day-per-week, 100-minute-per-session, low-impact aerobically demanding dance program on the cardiovascular fitness, muscular strength, and body composition of sedentary, middle-aged, overweight women. The program was designed to be enjoyable and to provide a social support system. The results showed that the program significantly improved cardiovascular fitness, muscular strength, and body composition. The program was well-received by the participants, and the results suggest that it may be a viable option for improving the health and fitness of sedentary, middle-aged, overweight women.
