Euro-Par 2003 Parallel Processing Harald Kosch, László Böszörményi, Hermann Hellwagner, 2004-06-01 Euro ParConferenceSeries The European Conference on Parallel Computing Euro Par is an international conference series dedicated to the promotion and advancement of all aspects of parallel and distributed computing The major themes fall into the categories of hardware software algorithms and applications This year new and interesting topics were introduced like Peer to Peer Computing Distributed Multimedia stems and Mobile and Ubiquitous Computing For the first time we organized a Demo Session showing many challenging applications The general objective of Euro Par is to provide a forum promoting the development of parallel and distributed computing both as an industrial technique and an academic discipline extending the frontiers of both the state of the art and the state of the practice The industrial importance of parallel and distributed computing is supported this year by a special Industrial Session as well as a vendors exhibition This is particularly important as currently parallel and distributed computing is evolving into a globally important technology the buzzword Grid Computing clearly expresses this move In addition the trend to a bile world is clearly visible in this year's Euro Par

The main audience for and participants at Euro Par are researchers in academic departments, industrial organizations and government laboratories. Euro Par aims to become the primary choice of such professionals for the presentation of new results in their specific areas. Euro Par has its own Internet domain with a permanent Web site where the history of the conference series is described: <http://www.euro-par.org>. The Euro Par conference series is sponsored by the Association for Computer Machinery (ACM) and the International Federation for Information Processing (IFIP).

Software Engineering and Middleware Thomas Gschwind, Cecilia Mascolo, 2005-03-31. Middleware provides an integration framework for multiple and potentially diverse computing platforms. It allows developers to engineer distributed applications more easily, providing abstractions and primitives to handle distribution and coordination. Middleware is constantly facing new challenges. Today's advances in computing, including development of pervasive applications, exacerbates the diversity problem, introducing variations not only in terms of performance but also in terms of environments and device characteristics. Software engineers are therefore challenged both in the area of the development of new and scalable middleware systems where open, heterogeneous, component-based platforms should provide richer functionality and services, and in the area of application development where tools to simplify the use of middleware solutions are necessary. Software Engineering and Middleware is the premier workshop for the research and practice community of software engineering working in both areas to present and discuss new ideas. In this field, SEM2004 was the fourth international workshop on software engineering and middleware of the EDO SEM workshop series. Previous workshops of this series were successfully held in 2002, 2000, and 1999. Most of the proceedings have been published by Springer in the Lecture Notes in Computer Science series.

Electronic Government: Concepts, Methodologies, Tools, and Applications Anttiroiko, Ari-Veikko, 2008-03-31. Provides research on e-government and its implications within the global context. Covers topics such as digital government, electronic justice, government to government, information policy, and cyber infrastructure research and methodologies.

iRODS Primer Arcot Rajasekar, Reagan Moore, Chien-Yi Hou, Christopher A. Lee, Richard Marciano, Michael Wan, Wayne Schroder, Sheau-Yen Chen, 2022-05-31. Policy-based data management enables the creation of community-specific collections. Every collection is created for a purpose. The purpose defines the set of properties that will be associated with the collection. The properties are enforced by management policies that control the execution of procedures that are applied whenever data are ingested or accessed. The procedures generate state information that defines the outcome of enforcing the management policy. The state information can be queried to validate assessment criteria and verify that the required collection properties have been conserved. The integrated Rule-Oriented Data System implements the data management framework required to support policy-based data management. Policies are turned into computer-actionable Rules. Procedures are composed from a micro-service-oriented architecture. The result is a highly extensible and tunable system that can enforce management policies, automate administrative tasks, and periodically validate assessment criteria.
