knowledge leveraging existing knowledge sometimes resulting in cutthroat innovations It also includes knowledge systems such as conventional university systems to Mode 2 university concepts culminating on integral research to innovation This book will help the reader to realise that the subject of knowledge creation is no longer business as usual Many innovations have been created for human benefit in general but such innovations may have benefited only parts of society The challenge in the world is that while new innovations may be brilliant there are sections of society who continue to slip into poverty Modern innovators must also consider such communities and come up with appropriate interventions This book will open the eyes of innovators to new possibilities In addition the subject of knowledge should not be an elitist affair One may stand to gain a lot by seeing the knowledge in other people whatever their station in life This realisation can enable serious innovators to widen their scope in terms of the sources of existing knowledge which can be improved and reassessed as new knowledge Such existing knowledge can be identified by engaging the very communities that may be affected by a problem or challenge Such communities will have had time to interrogate their situations and think of possible solutions to such though they might not have the economic capacity to implement such solutions This is always a useful starting point if one is seeking a solution to a community problem This book will be useful to students interested in the subject of knowledge and innovation from under graduate to PhD level It will also benefit captains of industry executives and managers who are interested in improving their knowledge improvement cycles in their companies **Bridging the Academia Industry Divide** Wilson R. are the need for more resources including funding teaching materials and adequate laboratories Effective STEM pedagogy is hampered by an education system that emphasises the curriculum and teacher centred focus instead of focusing on how students can be taught or learn Research has shown that in Zimbabwe STEM teachers must apply inventive pedagogies and suitable learner centred STEM teaching approaches As a result there is a need for more STEM related programs and courses in schools and universities to improve the opportunities for students to pursue careers in these fields Another challenge is the need for more awareness about the opportunities and importance of STEM education and interest in STEM subjects among students which can be attributed to a lack of exposure and understanding of the relevance and importance of these fields in today s world While lack of resources and other challenges hinder effectiveness opportunity lies in promising pathways of policy and practice In Zimbabwe there is a varying degree of success in the implemented competence based curriculum which emphasises inquiry based learning and STEM education Finally there is a need for early exposure to STEM based career opportunities and for more collaboration between the government private sector and educational institutions to address these challenges and promote STEM education in Zimbabwe This book uses Zimbabwe as an example to explore STEM education in poverty By examining the successes and challenges of STEM education in Zimbabwe this book offers valuable insights into how STEM education can be integrated into the curriculum in countries with developing and emerging economies This book is an essential resource for anyone interested in improving STEM education in underserved communities   Technology and Skills in Zimbabwe's Manufacturing S.
