

# Isaac Newton's 3 Laws of Motion

**Sir Isaac Newton (1642-1727)** was an English physicist and mathematician. Before the age of 30 he formulated the laws of motion and invented calculus. Much of our modern science is based on Newton's

## Newton's Laws of Motion

### Law One – Law of Inertia

An object at rest will stay at rest unless acted on by an unbalanced force.  
 An object in motion will stay in motion unless acted upon by an unbalanced force.

OR

*Things keep moving or stay at rest, unless a net force acts upon them.*

### Law Two – $F = ma$

The acceleration of an object is proportional to the force acting on it and inversely proportional to its mass.

OR

*Force causes acceleration, while mass resists acceleration*

### Law Three –

**Law of Equal and Opposite Forces.**  
 Whenever one object exerts a force on another object, the second exerts an equal and opposite force on the first.

OR

*For every action there is an equal and opposite reaction.*

### Inertia

Inertia is the property of an object that resists change of motion.

Moving objects have inertia: they want to keep moving;  
 stopped objects have inertia: they want to stay at rest.

*More mass = more inertia!*

*Something that is harder to push has more inertia!*

*More mass, more inertia*

*Less mass, less inertia*

### Force

A **force** is any action that can change or cause motion.  
**A force is any push or pull.**  
 We use Newtons (N) to measure force.

### Net Force

Net force is the sum of all the forces and has direction. (Be sure to make right positive and left negative.)

*An object will move in the direction of the net (or unbalanced) force.*

Net Force = + 200 N - 400 N = - 200 N (left)

### Newton's Second Law

Force  
(in Newtons)

$$F = ma$$

Mass  
(in kg)

Acceleration  
(in m/sec<sup>2</sup>)

*Force equals mass times acceleration.*

$F = ma$  tells us:

For the same acceleration,  
**more mass**

**requires more force.**

For the same mass,  
**more acceleration**  
**requires more force.**

Newton's 2nd Law tells us that when you accelerate (stomp on the gas) or decelerate quickly (brake fast) you use more force and wear out engine parts and brakes faster.

*Ex. How big a force does it take to give a 50 kg object an acceleration of 40 m/s<sup>2</sup>.*

Variables:

$$40 \text{ m/s}^2 = a$$

$$50 \text{ kg} = m$$

$$F = ?$$

Solve:

$$F = ma$$

$$F = 50(40)$$

$$F = 50 \times 40$$

$$F = 2000\text{N}$$

Equation:

$$F = ma$$

*Ex. If a 50 N force pulls on a 10 kg object, how much acceleration will occur?*

Variables:

$$50 \text{ N} = F$$

$$10 \text{ kg} = m$$

$$a = ?$$

Solve:

$$F = ma$$

$$50 = 10a$$

$$\frac{50}{10} = \frac{10a}{10}$$

$$a = 5 \text{ m/s}^2$$

Equation:

$$F = ma$$

*Ex. A force of 49 N causes a 7 m/s<sup>2</sup> acceleration. Find the mass of the object it was pulling.*

Variables:

$$49 \text{ N} = F$$

$$7 \text{ m/s}^2 = a$$

$$m = ?$$

Solve:

$$F = ma$$

$$49 = m7$$

$$\frac{49}{7} = \frac{m7}{7}$$

$$m = 7 \text{ kg}$$

Equation:

$$F = ma$$

Isaac Newton and the Laws of Motion Jordi Bayarri Dolz, 2023      **Newton's Principia** Isaac Newton, 2016-09-26

Mathematical Principles of Natural Philosophy often referred to as simply the Principia is a work in three books by Isaac Newton in Latin first published 5 July 1687 The Principia states Newton s laws of motion forming the foundation of classical mechanics Newton s law of universal gravitation and a derivation of Kepler s laws of planetary motion which Kepler first obtained empirically The Principia is justly regarded as one of the most important works in the history of science Alexis Clairaut assessed it in 1747 The famous book of mathematical Principles of natural Philosophy marked the epoch of a great

revolution in physics The method followed by its illustrious author Sir Newton spread the light of mathematics on a science which up to then had remained in the darkness of conjectures and hypotheses A more recent assessment has been that while acceptance of Newton's theories was not immediate by the end of a century after publication no one could deny that out of the Principia a science had emerged that at least in certain respects so far exceeded anything that had ever gone before that it stood alone as the ultimate exemplar of science generally     *The motion of bodies* Isaac Newton,1962     **Isaac Newton and the Laws of Motion** Andrea Gianopoulos,2007 In graphic novel format tells the story of how Isaac Newton developed the laws of motion and the law of universal gravitation Provided by publisher     An Essay on Sir Isaac Newton's Second Law of Motion ...
