The first two case studies focus on the engineering sector and illustrate the development of a cost management system in a water recycling context and the design of a budgetary system in a mining engineering context. The remaining case studies focus on the services sector, including cost management systems for a digital technology services provider and a medical insurance services provider, an alternative activity-based costing approach for a public sector services provider, and finally a re-designed value stream for an automotive services provider. Academic researchers and industry managers in the fields of management accounting and financial management, as well as engineering and operations management, will find value in the experiences described herein.
