Practical Dam Analysis Max A. M. Herzog, 1999 This book presents simple approximate methods of analysing embankment gravity and arch dams for design studies preliminary designs estimates of quantities checking computational methods and teaching Emphasis is placed on understanding the mechanical behaviour of the dam rather than the computational details **BOOK JACKET** *Dam-break Problems, Solutions and Case Studies* D. De Wrachien, 2009 The aim of the book is to give an up to date review on dam break problems along with the main theoretical background and the practical aspects involved in dam failures design of flood defense structures prevention measures and the environmental social economic and forensic aspects related to the topic Moreover an exhaustive range of laboratory tests and modeling techniques is explored to deal effectively with shock waves and other disasters caused by dam failures Disaster management refers to programs and strategies designed to prevent mitigate prepare for respond to and recover from the effects of these phenomena To manage and minimize these risks it is necessary to identify hazards and vulnerability by means of a deep knowledge of the causes which drive to dam failures and to understand the flow propagation process Knowledge and advanced scientific tools play a role of paramount importance of coping with flooding and other dam break problems along with capacity building in the context of political and administrative frameworks All these aspects are featured in the book which is a comprehensive treaty that covers the most theoretical and advanced aspects of structural and hydraulic engineering together with the hazard assessment and mitigation measures and the social economic and forensic aspects related to subject **Soil and Water Conservation Structures Design** Rajendra Singh, 2023-01-31 The book is designed to serve as a textbook for graduate and undergraduate courses on soil and water conservation engineering for students of agricultural engineering civil engineering environmental engineering and related disciplines The book presents the basics of soil and water erosion and describes the measures to control erosion focusing on structures to prevent and control erosion The chapters dedicated to erosion control structures provide a detailed view of each structural construction covering the function design and elements of each type of structure Some common type of structures covered in the book are terrace bunds vegetated waterways and gully control structures including spillways The book also covers wind erosion and control structures to prevent wind erosion Each chapter includes pedagogical elements such as examples practice questions and multiple choice type questions to improve understanding and aid in self study Besides serving as a textbook university coursework the book can also serve as a supplementary or primary text for professional development courses for practicing engineers engaged in soil and water conservation or watershed management The book will also serve as a reference for professionals environmental consultants and policy makers engaged in soil and water conservation related fields

Sansavini, Ali Ayoub, 2023-01-20 After a major disaster when investigators are piecing together the story of what happened a striking fact often emerges before disaster struck some people in the organization involved were aware of dangerous conditions that had the potential to escalate to a critical level But for a variety of reasons this crucial information did not reach decision makers So the organization moved ever closer to catastrophe effectively unaware of the possible threat despite the fact that some of its employees could see it coming What is the problem with communication about risk in an organization and why does this problem exist What stops people in organizations or project teams from freely reporting and discussing critical risks This book seeks to answer these questions starting from a deep analysis of 20 disasters where the concealment of risks played a major part These case studies are drawn from around the world and span a range of industries civil nuclear power coal oil and gas production hydropower energy metals and mining space exploration transport finance retail manufacturing and even the response of governments to wars famines and epidemics Together case studies give an insight into why people hesitate to report risks and even when they do why their superiors often prefer to ignore the news The book reviews existing research on the challenges of voice and silence in organizations This helps to explain more generally why people dread passing on bad news to others and why in the workplace they prefer to keep quiet about unpleasant facts or potential risks when they are talking to superiors and colleagues The discussion section of the book includes important examples of concealment within the Chinese state hierarchy as well as by leading epidemiologists and governments in the West during the novel coronavirus outbreak in Wuhan in 2019 2020 The full picture of the very early stage of the COVID 19 pandemic remains unclear and further research is obviously needed to better understand what motivated some municipal provincial and national officials in China as well as Western counterparts to obfuscate facts in their internal communications about many issues associated with the outbreak
