This volume contains the proceedings of the 3rd International Conference on Business Process Management BPM 2005 organized by LORIA in Nancy France September 5-8 2005. This year BPM included several innovations with respect to previous editions most notably the addition of an industrial program and of co-located workshops. This was the logical result of the significant and still growing industrial interest in the area and of the broadening of the research communities working on BPM topics. The interest in business process management and in the BPM conference was demonstrated by the quantity and quality of the paper submissions. We received over 176 contributions from 31 countries accepting 25 of them as full papers, 20 research papers and 5 industrial papers while 17 contributions were accepted as short papers. In addition to the regular industry and short presentations invited lectures were given by Frank Leymann and Gustavo Alonso. This combination of research papers, industrial papers, keynotes and workshops all of very high quality has shown that BPM has become a mature conference and the main venue for researchers and practitioners in this area. We would like to thank the members of the Program Committee and the reviewers for their efforts in selecting the papers. They helped us compile an excellent scientific program. For the difficult task of selecting the 25 best papers, 14% acceptance rate and 17 short papers, each paper was reviewed by at least three reviewers except some out of scope papers.

Business Process Management Jörg Desel, Barbara Pernici, Mathias Weske, 2004-06-04
In recent years the management of business processes has emerged as one of the major developments to ease the understanding of communication about and evolution of process-oriented information systems in a variety of application domains. Based on explicit representations of business processes, process stakeholders can communicate about process structure, content and possible improvements. Formal analysis, verification and simulation techniques have the potential to show deficits and to effectively lead to better and more executable processes. Process mining facilitates the discovery of process specifications from process logs that are readily available in many organizations. This volume of Springer's Lecture Notes in Computer Science contains the papers presented at the 2nd International Conference on Business Process Management BPM 2004 which took place in Potsdam, Germany in June 2004. From more than 70 submissions BPM 2004 received 19 high quality research papers were selected. BPM 2004 is part of a conference series that provides a forum for researchers and practitioners in all aspects of business process management. In June 2003 the 1st International Conference on Business Process Management took place in Eindhoven, The Netherlands. Its proceedings were published as Volume 2678 of Lecture Notes in Computer Science by Springer Verlag. A previous volume LNCS1806 on Business Process Management was based on four events devoted to this topic.

Business Process Modelling Bernd Scholz-Reiter,Eberhard Stickel,2012-12-06 Today information is considered to be a valuable company resource that has to be planned coordinated and documented Business processes need to be treated in the same way Moreover significant potential for improvement may lie in optimizing these processes As a consequence information should be collected and suitably modelled and business processes need to be analyzed and redesigned Business modelling usually deals with different views of a company The data view is concerned with information structures the functional view analyzes tasks and procedures the process view links different functions by analyzing workflows and events triggering them while the organizational view is concerned with the structure of the company under investigation These views should not however be treated in an isolated manner The key to success is to deal with the interaction between them Hence business modelling should provide an integrated view of all relevant informational functional organizational and workflow issues One of the most significant problems results from the complexity of the modelling task Modelling tools are required and are to be used in combination with other close methodologies and applications Suitable generalizations and or new methodologies need to be developed [A Pragmatic Guide to Business Process Modelling](#) Jon Holt,2009 This expanded second edition shows how effective and accurate modelling can deliver a more complete understanding of a business By applying the visual modelling techniques described here it is possible to map an entire business using the Unified Modelling Language UML Jon Holt covers all aspects of the BPM process including analysis specification measurement and documentation New chapters deal with the presentation of process information enterprise architecture and business tools

Systems Engineering for Business Process Change Peter Henderson, 2012-12-06 A very large proportion of commercial and industrial concerns in the UK find their business competitiveness dependent on huge quantities of already installed legacy IT Often the nature of their business is such that to remain competitive they have to be able to change their business processes Sometimes the required change is radical and revolutionary but more often the required change is incremental For such incremental change a major systems engineering problem arises The cost and delay involved in changing the installed IT to meet the changed business requirements is much too high In order to address this issue the UK Engineering and Physical Science Research Council EPSRC set up in 1996 a managed research programme entitled Systems Engineering for Business Process Change SEBPC I was appointed as co ordinator of the programme The overall aim of this new managed research programme was to release the full potential of IT as an enabler of business process change and to overcome the disabling effects which the build up of legacy systems has on such change As such this aim addressed a stated objective of the Information Technology and Computer Science IT CS part of EPSRC to encourage research at a system level
