is the most frequently used process to cast not only steel but also aluminium and copper alloys Since its widespread introduction for steel in the 1950s it has evolved to achieve improved yield quality productivity and cost efficiency It allows lower cost production of metal sections with better quality due to the inherently lower costs of continuous standardized production of a product as well as providing increased control over the process through automation Nevertheless challenges remain and new ones appear as ways are sought to minimize casting defects and to cast alloys that could originally only be cast via other means This Special Issue of the journal Metals consists of 14 research articles that cover many aspects of experimental work and theoretical modelling related to the ongoing development of continuous casting processes

Practical Guide to Antimicrobial Active Packaging Rafael Gavara, 2015-10-13 Antimicrobial packaging systems are those that beneficially interact with the food or with the surrounding environment inhibiting microorganism growth or reducing their counts to improve the quality and extend the shelf life of industrially produced foods They have undoubtedly become a fully accepted alternative to the direct addition of preservatives to foods with excellent future prospects This book will help develop a working knowledge and understanding of antimicrobial packaging it includes a description of the antimicrobial agents most commonly used and their mechanisms of action the manufacturing methods

available to fabricate the active system the critical parameters to make an effective product and the tools to optimise them and the various in vitro and in vivo methods for measuring the goodness of the antimicrobial system for validation purposes The reader will develop the ability to understand why a specific agent is selected for a particular food product or why a specific polymeric material and manufacturing technology are chosen The reader will also become familiar with the different procedures for improving the activity of the packaging solution that is being developed and ways of testing its efficacy This will accelerate the formulation of the active packaging concept reducing development time with respect to the trial and error processes common in many literature reports Finally it will help to identify the best and most cost effective solutions This volume is intended to be a practical guide to antimicrobial packaging and a quick reference for students and researchers from both academia and industry
