Control Systems for Heating, Ventilating and Air Conditioning R. Haines,2012-12-06 There are two reasons why we have a new edition every four or five years The first is that technology changes Chapter 10 on computer based controls has had to be almost completely rewritten Fundamentals don't change but the tools available to us do change Evaluation and proper use of those tools makes it even more imperative that we understand fundamentals Many of our control problems stem from the use of new devices as a solution to problems that are in fact control design errors New gadgets for example Direct Digital Controls DDC will not solve basic problems and may even compound them None the less you will find an extensive discussion of DDC because I think it is the probable future in HVAC control But it must be applied with a good understanding of fundamentals The second reason is that I keep learning and need to pass on my new and improved understanding to my readers Thus you will find a number of small but important revisions a dissertation on control modes and a much more detailed discussion of how electronic control devices work There are a few places where I have corrected what I now perceive to be errors I apologize for these I have been much encouraged by the acceptance of this book in the past and I hope that this new edition will be helpful Thank you for your support **Operator's, Organizational, Direct Support & General Support Maintenance Manual for Air Conditioner, Horizontal, Compact, 36000 BTUH, 208 Volt, 3 Phase 400 Hertz, NSN 4120-00-063-8182, American Air Filter Co. Model CH436-1 and 208 Volt, 3 Phase, 50/60 Hertz, NSN 4120-00-063-7575, American Air Filter Co. Standard 90.1-2001 and reflects all addenda and changes made to the standard. The User's Manual eases use of the standard by offering information about its intent and application as well as by including numerous examples and sample calculations that illustrate how architects and engineers can apply Standard 90.1-2001 to their building designs. The manual streamlines the compliance process and includes standard ready-to-use compliance forms. It also provides information on energy simulation computer programs used in the energy cost budget method of compliance. A CD accompanies the manual and contains an updated version of the EnvStd computer program and PDF versions of the compliance forms provided in the User's Manual. The EnvStd program is used for doing building envelope trade-offs. The CD requires a 486 or Pentium-based computer and either Microsoft Windows 95 or Windows NT 3.5 or later, 8MB of RAM, 16MB recommended and 10MB of free hard disk space is required.

Control Systems for Heating, Ventilating, and Air Conditioning Roger W.

Haines, Douglas C. Hittle, 2012-12-06 In the First Edition of this classic text, Roger Haines devised a simple building block method which enabled students to quickly learn about the operating principles and applications of all the basic devices and subsystems used in HVAC control. The new Fifth Edition, completely revised by Douglas Hittle, takes into account the many technological changes that have arisen since then. Crystal clear guidelines on combining control devices, circuits, computers, and HVAC equipment into efficient control systems that are accurate and energy efficient are presented along with hundreds of charts and illustrations which provide data critical to the understanding and design of modern HVAC systems. These include psychrometric charts and tables relating to optimal levels of temperature and humidity at specific altitudes, block flow diagrams which show control component function, circuit diagrams of important electrical control system components, schematic diagrams showing the configuration of various control systems.
