Understanding the Social Economy

Jack Quarter, Laurie Mook, Ann Armstrong, 2009-11-07 In Understanding the Social Economy Jack Quarter Laurie Mook and Ann Armstrong integrate a wide array of organizations founded upon a social mission social enterprises nonprofits co operatives credit unions and community development associations under the rubric of the social economy This framework facilitates a comprehensive study of Canada s social sector an area often neglected in the business curricula despite the important role that these organizations play in Canada s economy Invaluable for business programs that address issues such as community economic development co operatives and nonprofit studies and management Understanding the Social Economy presents a unique set of case studies as well as chapters on organizational design and governance social finance and social accounting and accountability The examples provide much needed context for students and allow for an original and in depth examination of the relationships between Canada s social infrastructure and the public and private sectors With this work Quarter Mook and Armstrong illuminate a neglected facet of business studies to further our understanding of the Canadian economy

Partial Differential Equations VI Yu.V. Egorov, M.A. Shubin, 2013-03-14 0 1 The Scope of the Paper This article is mainly devoted to the operators indicated in the title More specifically we consider elliptic differential and pseudodifferential operators with infinitely smooth symbols on infinitely smooth closed manifolds i e compact manifolds without boundary We also touch upon some variants of the theory of elliptic operators in \mathbb{R}^n A separate article Agranovich 1993 will be devoted to elliptic boundary problems for elliptic partial differential equations and systems We now list the main topics discussed in the article First of all we expound theorems on Fredholm property of elliptic operators on smoothness of solutions of elliptic equations and in the case of ellipticity with a parameter on their unique solvability A parametrix for an elliptic operator A and A_J is constructed by means of the calculus of pseudodifferential also for operators in \mathbb{R}^n which is first outlined in a simple case with uniform in x estimates of the symbols As functional spaces we mainly use Sobolev 2 spaces We consider functions of elliptic operators and in more detail some simple functions and the properties of their kernels This forms a foundation to discuss spectral properties of elliptic operators which we try to do in maximal generality i e in general

without assuming selfadjointness This requires presenting some notions and theorems of the theory of nonselfadjoint linear operators in abstract Hilbert space *American Printer*, 2008 **Symmetry Breaking** Franco Strocchi, 2007-10-31 The main motivation for such lecture notes is the importance of the concept and mechanism of spontaneous symmetry breaking in modern theoretical physics and the relevance of a textbook exposition at the graduate student level beyond the oversimplified non rigorous treatments often confined to specific models One of the main points is to emphasize that the radical loss of symmetric behaviour requires both the existence of non symmetric ground states and the infinite extension of the system The first Part on SYMMETRY BREAKING IN CLASSICAL SYSTEMS is devoted to the mathematical understanding of spontaneous symmetry breaking on the basis of classical field theory The main points which do not seem to appear in textbooks are the following i Existence of disjoint Hilbert space sectors stable under time evolution in the set of solutions of the classical non linear field equations They are the strict analogs of the different phases of statistical mechanical systems and of the inequivalent representations of local field algebras in quantum field theory QFT As in QFT such structures rely on the concepts of locality or localization and stability see Chap 5 with emphasis on the physical motivations of the mathematical concepts such structures have the physical meaning of disjoint physical worlds disjoint phases etc which can be associated to a given non linear field equation The result of Theorem 5.2 may be regarded as a generalization of the criterium of stability to infinite dimensional systems and it links such stability to elliptic problems in \mathbb{R}^n with non trivial boundary conditions at infinity Appendix E

Making Software Teams Effective Chaehan So, 2010 How does good teamwork emerge Can we control mechanisms of teamwork The author has analyzed these questions in a study involving 227 participants of 55 software development teams First he empirically confirmed his teamwork model based on innovation research goal setting and control theory Second he measured the impact of a wide selection of agile practices on these teamwork mechanisms Third he explained these impacts based on a thorough review of current psychological research This book is intended for people working in agile contexts as they will gain insight into the complexity of how good teamwork emerges This insight on team dynamics may also prove valuable for upper management for calibrating agile practices and soft factors thus increasing the effectiveness of software teams **Advances and Trends in Artificial Intelligence. progress can be observed in the areas of methodological developments and applications to organic and inorganic matter One volume devoted to more or less one of each of these areas has been published in the preceding three issues This volume can be considered an addendum to this series Selected methods and applications of Solid State NMR are featured in three chapters The first one treats the recoupling of dipolar interactions in solids which are averaged by fast sample rotation Following an introduction to effective Hamiltonians and Floquet theory different types of experiment such as rotary resonance dipolar chemical shift correlation spectroscopy rotational resonance and multipulse recoupling are treated in the powerful Floquet formalism In the second chapter the different approaches to line narrowing of quadrupolar nuclei are reviewed in a consistent formulation of double resonance DaR and dynamic angle spinning DAS Practical aspects of probe design are considered as well as advanced 2D experiments sensitivity enhancement techniques and spinning sideband manipulations The use of such techniques dramatically increases the number of nuclei which can be probed in high resolution NMR spectroscopy The final chapter describes new experimental approaches and results of structural studies of noncrystalline solids
