Manual For Problem Behaviour Checklist:

Manual for the Child Behavior Checklist/4-18 and 1991 Profile Thomas M. Achenbach, 1991-01-01 The Child Behavior Checklist for ages 4-18 is designed to record children's competencies and problems as reported by their parents or parent surrogates. It can be self-administered or administered by an interviewer. The 20 competence items obtain parents' reports of the amount and quality of their child's participation in sports, hobbies, games, activities, jobs, and chores, and friendships; how well the child gets along with others; and plays and works alone and school functioning. Each of the 118 specific problem items and two open-ended problem items are scored on a 3-step response scale. The Checklist is intended as only one component of many, including teacher reports, standardized tests, physical assessment, and direct assessment of the child. Reliability and validity are discussed.

Practitioner's Guide to Empirically Based Measures of School Behavior Mary Lou Kelley, David Reitman, George H. Noell, 2006-05-02 Children's display of unacceptable behavior in the school setting—school violence, academic underachievement, and school failure—represent a cluster of problems that touches all aspects of society. Children with learning and behavior problems are much more likely to be unemployed, exhibit significant emotional and behavior disorders in adulthood, as well as become incarcerated. For example, by adolescence, children with Attention Deficit Hyperactivity Disorder are more likely to be retained, a grade drop-out of school, have contact with the law, or fair worse along a number of dimensions than their unaffected siblings (Barkley, 1998). Identification, assessment, and treatment of children with externalizing behavior problems and learning disabilities is critical to optimizing development and prevention of relatively tractable behavioral and emotional problems in adulthood. For example, poor interpersonal problem solving and social skills excesses and deficits are strongly associated with poor outcomes in adolescence and adulthood. The school is where children learn essential academic, social, and impulse control skills that allow them to function effectively in later years. School is where problems in these areas can be most easily identified and addressed. The purpose of this book is to provide an overview of assessment practices for evaluating children's externalizing behavior problems exhibited in the school environment. Reviews of approximately 100 assessment devices for measuring children's externalizing problems are included. Instruments include structured interviews, rating scales, and observational methods.
