Advanced Mechanics in Robotic Systems Nestor Eduardo Nava Rodríguez, 2011-07-22 Humans have always been fascinated with the concept of artificial life and the construction of machines that look and behave like people. As the field of robotics evolves, it demands continuous development of successful systems with high performance characteristics for practical applications. **Advanced Mechanics in Robotic Systems** illustrates original and ambitious mechanical designs and techniques for developing new robot prototypes with successful mechanical operational skills. Case studies are focused on projects in mechatronics that have high growth expectations: humanoid robots, robotics hands, mobile robots, parallel manipulators, and human-centred robots. A good control strategy requires good mechanical design, so a chapter has also been devoted to the description of suitable methods for control architecture design. Readers of **Advanced Mechanics in Robotic Systems** will discover novel designs for relevant applications in robotic fields that will be of particular interest to academic and industry-based researchers. Industrial Robotics Handbook V. Daniel Hunt, 1983 Presents information obtained from a variety of knowledgeable sources. Provides an extensive list of various robotics systems and the potential of smart robots grouped into types of models. Includes important technical material on tolerances, load-carrying capacities, price, and names and addresses of companies and individuals to contact for further information. **Uso De La Tecnología En El Aula II** Gregorio Sanchez Avila, 2014-04-24 Este libro hace un recorrido de la incorporación de las máquinas herramienta y las computadoras. Así como los avances tecnológicos que menciona el plan de estudios 2011 de la asignatura tecnológica. Permite al docente conocer y ampliar sus conocimientos de la evolución de manufactura desde su inicio hasta hoy en día 2013. Que va desde las máquinas convencionales hasta las de Control Numérico Computarizado CNC pasando por las primeras máquinas de Control Numérico. La incorporación de la computadora que se conoce como manufactura asistida por computadora CAM e integrado el Diseño Asistido por Computadora CAD se tiene como resultado los sistemas modernos de manufactura CAD/CAM y la descripción de un ejemplo de un programa MASTERCAM. Además de códigos y ciclos de maquinado programados en base a los realizados en las máquinas convencionales. Se incluyen las tecnologías de la información y la comunicación TIC que proporciona amplios beneficios y optimizar los conocimientos adquiridos de los diferentes programas educativos e informáticos como Word, Excel y Power Point incluidos en el Office. La representación gráfica en 2D y 3D, bases de la geometría y las bases del CAD, mejor conocido como AutoCAD y ejercicios para iniciar a dibujar. El último capítulo una semblanza de la educación secundaria y la historia del IPN y reseña de mi primer libro.
