

# Drawdown test

the greater amount of drawdown,  
the lower the capacity of the well

if the water supply is strong, the  
water level in the well will not drop  
significantly over the course of the  
drawdown test

a recovery test measures how quickly the  
water level in the well returns to normal  
after the drawdown test is finished

a recovery rate of 3 gallons per minute is  
considered acceptable in many areas
