

EVO192 Wiring Diagram

AUX LED and AUX control button activates and deactivates the auxiliary output. Before adding any modules to the control panel make sure you shut down the AUX output by pressing and holding the AUX button for 3 seconds.

Caution: Disconnect the battery before replacing the fuse.

The signal transmission to the Control Station may be performed by following methods: Landline (PTN), Internet, and (GPRS). Only Internet and (GPRS) method of transmission may be used for Commercial applications.

12Vdc 10A
Rechargeable Lead
Acid Backup Battery

Battery Capacity for emergency standby at least 4 hours
WARNING: To prevent risk of electric shock, disconnect AC battery and phone cord BEFORE servicing.

For residential installations use transformer made by Universal Power Group model (UP10000)

For US, CA, EU, Latin (Class 2) wall
mounting
COMMERCIAL
power supply with
recessing mount.

For Canada, CSA
(UL/ETL Listed)
Class 2 Power
Supply with NO
recessing mount.

Transformer Requirements

Auxiliary Supply can provide:
Automatic Shut-Down
Voltage Battery Charge Controller

Do not short the terminals of the transformer together. This causes the internal fuse to blow.

The transformer must be connected to a 120 VAC, 24-hour outlet not controlled by a switch other than an approved over-current protection device.

For continued protection against risk of fire, replace fuses only with fuses of the same type and rating.

The "BELL" output will
shut down if the current
exceeds 3A.

*A LED module is required if
the bell is not equipped with an
internal module. Position the
module as close as possible to
the bell. A resistor is not
required for alarm.
BELL CONTAINS RESISTANCE

The total load of the current draw from the bellwires and the AUX
must be limited to 3.0A. Exceeding this limit will overload the panel
power supply and lead to complete system shutdown.

Please Note: When powering up the (EVO) control panel, the panel will begin a module scan to verify that all modules connected to the panel are operational. The scanning process will take between 30 seconds and 5 minutes to complete depending on the number of modules connected to the control panel. The module scan is complete when the LCD keypad begins to show the partition status. Only after the module scan is completed will the control panel be fully operational. When installing the bellwires in a noisy environment or when connecting the bellwires across separate buildings, you must use a shielded cable. Refer to section 2.10.1. Please see ETL and ETL-C Warnings for and information in the appendix.

Wiring methods that shall be in accordance with the National Electrical Code, ANSI/NFPA 70, the Standard for Installation and Construction of Burglar and Fire Alarm Systems, UL 864, and the Standard for Control Station Alarm Services, UL 867.

Intended wiring methods must be in keeping with the requirements of CSA/CES 1, Canadian Electrical Code, Part I, Safety Standard for Electrical Installations.

The system should be installed in accordance with Chapter 2 of the National Fire Alarm Code, ANSI/NFPA 72.

Red "STATUS" LED

Flashing - indicates proper operation
Always on - panel is using a phone line
Fast Flash - indicates a control panel failure
Off - Control panel error

Location for connecting an optional (GSM) module

Notes:

- (1) Wiring connections have to be in the same route of these terminals.
- (2) Data Input Specifications:
Maximum loop current: (circuit board) 2.0 mA
Maximum loop voltage: (circuit board) 5.0 VDC
- (3) Disconnect bellwires just before connecting.
- (4) The wire length switch needs to be connected to a module zone configured for 24 hrs.
- (5) For Maximum number of devices to be employed refer to the features in section 5.1.
- (6) The maximum permissible wire size to be employed shall be not smaller than No. 12 AWG (0.13 mm²).
- (7) (GSM) trigger: This jumper allows you to choose whether the word wire relay/RS485 are provided (1 or 2) or not (1 or 2).

The (COMBUS) supports a maximum of 256 (EVO192) modules. Although external power supplies can be used to provide power to modules connected far from the control panel the total distance of all runs of wire combined cannot exceed 100m (3280 ft.). For example if ten runs of wire measuring 100m (3280 ft.) each are connected to the control panel, the total distance would be 3280m (10800 ft.) which exceeds the system capacity.

All knockouts provided for connection of a field wiring system in a field wiring compartment shall accommodate conductors of the trade size according to NEC.

The metal housing which encloses the Fire and Burglar system housing has knockouts on the sides and in the back enclosure. The wiring method requires that knockouts are used for wiring through the metal box, including the transformer with Plug-in Power Supply.
