Abstract: The chemical synthesis of polycarbonate (PC) by the transesterification of bisphenol A (BPA) and phosgene is a well-known process. This process involves the use of phosgene, which is a highly toxic gas. In this study, we have developed a new method for the synthesis of PC using BPA and phosgene. The reaction was carried out in the presence of a catalyst, and the resulting PC was characterized by its mechanical and thermal properties. The results show that the new method is a promising alternative to the traditional process.
