Using words from the word boxes below, complete the paragraph about heat transfer.

fastest	hot	low	solid	fluid
conduction	above	convection	energy	emit
warmer	matter	transfer	absorb	temperature
radiation	contact	cold	vibrate	waves

All matter has heat. Heat is a form of energy caused by particles in an object that vibrate. The faster the particles of an object vibrate, the warmer the object will be. Because particles of an object are always moving, heat transfer is always happening. Heat always flows in the same direction: from hot to cold. Heat transfer will stop once two objects reach the same temperature. This is known as equilibrium.

There are three key ways that heat transfers. With solid objects, heat transfers when the objects come into direct contact with other things. This is known as conduction. Liquids and gases are different. Because these two states of matter flow, or are fluid, heat transfer happens when warmer, less dense particles rise and cooler, more dense particles sink. This ongoing process is known as a convection current. Heat can also be transferred through space (distance) in the form of waves. This process is known as radiation. All objects give off, or emit, some heat. All objects also take in, or absorb, heat.

Identify the method of heat transfer that takes place in each illustration. Write the method of heat transfer underneath the picture.
