Originally published by John Wiley and Sons in 1983 Partial Differential Equations for Scientists and Engineers was reprinted by Dover in 1993 Written for advanced undergraduates in mathematics the widely used and extremely successful text covers diffusion type problems hyperbolic type problems elliptic type problems and numerical and approximate methods Dover's 1993 edition which contains answers to selected problems is now supplemented by this complete solutions manual

Fundamentals of Systems Biology Markus W. Covert, 2017-10-19 For decades biology has focused on decoding cellular processes one gene at a time but many of the most pressing biological questions as well as diseases such as cancer and heart disease are related to complex systems involving the interaction of hundreds or even thousands of gene products and other factors How do we begin to understand this complexity *Fundamentals of Systems Biology* From Synthetic Circuits to Whole cell Models introduces students to methods they can use to tackle complex systems head on carefully walking them through studies that comprise the foundation and frontier of systems biology The first section of the book focuses on bringing students quickly up to speed with a variety of modeling methods in the context of a synthetic biological circuit This innovative approach builds intuition about the strengths and weaknesses of each method and becomes critical in the book's second half where much more complicated network models are addressed including transcriptional signaling metabolic and even integrated multi network models The approach makes the work much more accessible to novices undergraduates medical students and biologists new to mathematical modeling while still having much to offer experienced modelers whether their interests are microbes organs whole organisms diseases synthetic biology or just about any field that investigates living systems

NUMERICAL, SYMBOLIC AND STATISTICAL COMPUTING FOR CHEMICAL ENGINEERS USING MATLAB
Ghosh, Pallab, 2018-09-01 Numerical analytical and statistical computations are routine affairs for chemical engineers They usually prefer a single software to solve their computational problems and at present MATLAB has emerged as a powerful computational language which is preferably used for this purpose due to its built in functions and toolboxes Considering the needs and convenience of the students the author has made an attempt to write this book which explains the various concepts of MATLAB in a systematic way and makes its readers proficient in using MATLAB for computing It mainly focuses on the applications of MATLAB rather than its use in programming basic numerical algorithms Commencing with the introduction to MATLAB the text covers vector and matrix computations solution of linear and non linear equations differentiation and integration and solution of ordinary and partial differential equations Next analytical computations using the Symbolic Math Toolbox and statistical computations using the Statistics and Machine Learning Toolbox are explained Finally the book describes various curve fitting techniques using the Curve Fitting Toolbox Inclusion of all these advanced level topics in the book stands it out from the rest

KEY FEATURES Numerous worked out examples to enable the readers
