This professional treatise on engineering graphics emphasizes engineering geometry as the theoretical foundation for communication of design ideas with real world structures and products. It considers each theoretical notion of engineering geometry as a complex solution of direct and inverse problems of descriptive geometry and each solution of basic engineering problems presented is accompanied by construction of biunique two and three dimension models of geometrical images. The book explains the universal structure of formal algorithms of the solutions of positional metric and axonometric problems as well as the solutions of problems of construction in developing a curvilinear surface. The book further characterizes and explains the added laws of projective connections to facilitate construction of geometrical images in any of eight octants. Laws of projective connections allow constructing the complex drawing of a geometrical image in the American system of measurement and the European system of measurement without errors and mistakes. The arrangement of projections of a geometrical image on the complex drawing corresponds to an arrangement of views of a product in the projective drawing for the European system of measurement. The volume is ideal for engineers working on a range of design projects as well as for students of civil structural and industrial engineering and engineering design. **IT Architecture & Essential Practice for IT Business Solutions** Peter Beijer, Theo de Klerk, 2010-03-26. This book is about IT architecture set against the background of the practical insights gained at HP Hewlett Packard since 1986 and formalized in the HP methodology for IT Strategy and Architecture ITSA. The important message is that architecture is used to solve problems or exploit opportunities and is not used for the sake of architecture. Core to this is the concept of a seamless chain of justification that unites stakeholders in defining, reinforcing and supporting the single best fitting IT business solution. This book teaches the IT architecture practitioner how to align the different views and interests of these stakeholders into coherent IT architecture artifacts by permeating the business, functional, technical and implementation perspectives.
