Pump ranges

These operating instructions concern the following side channel vacuum pumps and compressors: SAH. The performance curves showing capacity against vacuum or pressure can be seen in data sheets D 556/1, D 556/2 and D 556/3 or D 656/1, D 656/2 and D 656/3.

Description

All SAH models work according to the dynamic compression principle utilising a non-contact rotating impeller. They have a built-in motor. A high efficiency two stage impeller is fitted on to the motor shaft. Models up to SAH 75 (4.8 kW) (picture 1) use the motor fan for cooling. Models SAH 75-505 kW (picture 2) have an additional cooling fan situated between the motor and blower housing.

Air inlet and outlets have built-in silencers with the addition of a mesh disc on the suction silencer to protect the unit from particles larger than 5 mm. Both the inlet and outlet have an inside connection thread corresponding to DIN ISO 228. Versions of the SAH have on the suction side a solenoid valve and on the pressure side different connection flanges. All the parts are made from a special aluminium alloy except for the motor rotor, stator and shaft.

Optional extras: As required, vacuum or pressure limiting valve, non-return valve, suction filter, motor starter, vacuum/pressure change over valve.

Special versions: anti corrosive internal coating, gas tight version.
