Mathematical Modeling, Simulations, and AI for Emergent Pandemic Diseases Esteban A.

Hernandez-Vargas, Jorge X. Velasco-Hernandez, 2023-03-21 Mathematical Modeling Simulations and Artificial Intelligence for Emergent Pandemic Diseases Lessons Learned from COVID 19 includes new research models and simulations developed during the COVID 19 pandemic into how mathematical methods and practice can impact future response Chapters go beyond forecasting COVID 19 bringing different scale angles and mathematical techniques e g ordinary differential and difference equations agent based models artificial intelligence and complex networks which could have potential use in modeling other emergent pandemic diseases A major part of the book focuses on preparing the scientific community for the next pandemic particularly the application of mathematical modeling in ecology economics and epidemiology Readers will benefit from learning how to apply advanced mathematical modeling to a variety of topics of practical interest including optimal allocations of masks and vaccines but also more theoretical problems such as the evolution of viral variants Provides a comprehensive overview of the state of the art in mathematical modeling and computational simulations for emerging pandemics Presents modeling techniques that go beyond COVID 19 and that can be applied to tailoring interventions to attenuate high death tolls Includes illustrations tables and dialog boxes to explain highly specialized concepts and insights with complex algorithms along with links to programming code

Mathematics and Its Connections to the Arts and Sciences (MACAS) Claus Michelsen, Astrid Beckmann, Viktor Freiman, Uffe Thomas Jankvist, Annie Savard, 2022-12-19 This book celebrates the 15th anniversary of the bi annual symposium series Mathematics and its Connections to the Arts and Sciences MACAS which was first held in 2005 following the continued collaboration of an international group of researchers from ICME Topic Study Group 21 The MACAS conferences bring together scientists and educators who are interested in the connection between mathematics arts and science in educational curriculum while emphasizing on as well as researching about the role of mathematics By pooling together these different approaches and viewpoints between mathematics arts and sciences this book reveals possible synergies and paths for collaborations In view of the challenges of the 21st century a modern approach to education with a focus on multi and interdisciplinarity is more important than ever The role of mathematics assumes a key role in this approach as it is connected to all other disciplines such as STEM education physics chemistry biology aesthetics and language and can serve as a bridge between them This book discusses amongst others the curricular approaches to integrate mathematics and other disciplines the importance of mathematical modelling and the interdisciplinarity ways for learning and studying of mathematics as well as the intercultural dimensions of mathematics and mathematics in the digital era All topics will be presented from very different perspectives and regarding very different contexts including digitization culture and sustainability This unique collection will serve as a very valuable and compact source for all above mentioned scientists and educators as well as for use in advanced teacher education courses

Mathematical Modeling in the Age of the Pandemic William P. Fox, 2021-06-09 One cannot watch or read about the news these days without hearing about the models for COVID 19 or the testing that must occur to approve vaccines or treatments for the disease The purpose of Mathematical Modeling in the Age of a Pandemic is to shed some light on the meaning and interpretations of many of the types of models that are or might be used in the presentation of analysis Understanding the concepts presented is essential in the entire modeling process of a pandemic From the virus itself and its infectious rates and deaths rates to explain the process for testing a vaccine or eventually a cure the author builds presents and shows model testing This book is an attempt based on available data to add some validity to the models developed and used showing how close to reality the models are to predicting results from previous pandemics such as the Spanish flu in 1918 and more recently the Hong Kong flu Then the author applies those same models to Italy New York City and the United

States as a whole Modeling is a process It is essential to understand that there are many assumptions that go into the modeling of each type of model The assumptions influence the interpretation of the results Regardless of the modeling approach the results generally indicate approximately the same results This book reveals how these interesting results are obtained
