Graph Layout Support for Model-Driven Engineering Miro Spönemann,2015-03-16 Automatic layout is an important
tool for the efficient use of graphical models in a model driven engineering MDE context Since the 1980s research on graph
layout methods has led to a multitude of different approaches and several free software libraries for graph layout are
available However today s practically relevant MDE tools hardly reflect this diversity This thesis aims to support the use of
automatic graph layout in such tools A special focus is on the requirements of data flow models where constraints on the
positioning of ports and the routing of hyperedges pose additional challenges These constraints are approached with
extensions of the layer based graph layout method Furthermore we discuss an infrastructure for managing collections of
layout algorithms allowing to flexibly specify layout configurations These concepts are implemented in an open source
project based on Eclipse an extensible platform that is well known as a Java IDE and also hosts a large number of MDE tools
The presented contributions allow to integrate high quality automatic layout into these tools with low effort **Technical**
