[Production at the Leading Edge of Technology](#) Welf-Guntram

Drossel, Steffen Ihlenfeldt, Martin Dix, 2025-08-22 This book contains all contributions to the congress in which both detailed

scientific investigations and technological innovations in the process chains of machining and forming are discussed as well as comprehensive far sighted overall views on the planning and control of production processes These approaches are supplemented by more interdisciplinary cross sectional topics such as robotics control engineering automation materials technology additive manufacturing and human centered production It is particularly striking that the main approaches presented aim to improve efficiency in production using data driven methods such as machine learning and artificial intelligence However the use of measurement results to improve simulations is also frequently addressed The book proceedings show that transformations can only succeed through the realization of both detailed technical improvements in production technologies and optimized production organization
