Active Reading**Declines from Population Change in Asia**

Read the passage below and answer the questions that follow.

Over time, the population of populations change because of the way that individuals contribute to the next generation. Some people believe, however, that the population growth rate for Asia, especially, is slowing and that this is good. The average fertility rate in Asia is 2.1 children per woman, which is just above the replacement level of 2.0. This means that for every 100 women, there are 210 children. This is a slight increase over the replacement level, but it is not enough to keep the population growing. In fact, the population of Asia is declining. This is because the average fertility rate is falling, and the population is aging. This means that there are more people who are older than 65 and fewer people who are younger than 15.

Answer the questions below.

The average fertility rate is the number of children born to a woman. This means that the average fertility rate in Asia is 2.1. This means that for every 100 women, there are 210 children. This is a slight increase over the replacement level, but it is not enough to keep the population growing.

Which of the following is the best evidence from the passage that the population of Asia is declining?

- _____ (A) The average fertility rate in Asia is 2.1, which is just above the replacement level of 2.0.
- _____ (B) The average fertility rate in Asia is 2.1, which is just above the replacement level of 2.0.
- _____ (C) The average fertility rate in Asia is 2.1, which is just above the replacement level of 2.0.
- _____ (D) The average fertility rate in Asia is 2.1, which is just above the replacement level of 2.0.
- _____ (E) The average fertility rate in Asia is 2.1, which is just above the replacement level of 2.0.

- _____ (F) The average fertility rate in Asia is 2.1, which is just above the replacement level of 2.0.
- _____ (G) The average fertility rate in Asia is 2.1, which is just above the replacement level of 2.0.
