

THE FORD - FERGUSON TRACTOR

• The entirely new system of land cultivation made possible by the Ford-Ferguson Tractor was developed to give effect to four fundamental principles:

1. To so cut the cost of farm products that farming can be made prosperous without increasing the cost to the consumer.
2. To make farming attractive to youth and stop the drift from the land.
3. To assist all other industries through a prosperous agriculture and stimulate greater industrial use of farm products by cutting costs, thus increasing the total farm market.
4. To lay the foundation for a greater National Security.

The present relatively high cost of farm production rests on the fact that, in the main, the nation's farmers have not been able to adopt the principles of mechanization which have made other industries prosperous.

It was with this challenge in mind that the manufacturing resources of The Ford Motor Company were placed behind the genius and practical experience of Mr. Harry Ferguson to produce a tractor designed to replace the horse. To replace him because he is a waste of land and time.

A generation of tractor experience has proved the horse cannot be replaced by substituting a good machine in front of the same old tools.

So, all the old ideas about pulling and controlling implements were thrown overboard and a new principle was developed.

This new principle is so efficient that the Ford-Ferguson Tractor can work profitably, under the most difficult conditions. It will not only pull tools for which a heavy tractor previously was necessary, but it will go everywhere and do all the work the horse will do . . . and do it better and cheaper.

It is a new system of land cultivation that every progressive farmer will take great pride in using on his farm.

In addition to the many mechanical refinements built into the Ford-Ferguson Tractor, features providing for the comfort and convenience of the operator also are to be found. Features that save his time—such as one-minute implement change. Features that save his strength—such as finger tip implement control. Features that protect his safety—such as an electric starter that will not operate unless the tractor is in neutral gear.

A study of these features, described on the following pages, will clearly show how the Ford-Ferguson Tractor has met the challenge to provide the farmer with a means for reducing costs . . . saving time . . . protecting health . . . and producing greater yields.
