Simplify the expression: 3x^2 + 4x + 5 + 2x^2 - x - 3 Answer: 5x^2 + 3x + 2

Find the degree of the polynomial: 4x^3 + 3x^2 + 7x + 5

Answer: 3 (The highest power of x in the expression is 3, so the degree of the polynomial is 3)

Multiply the polynomials: (2x + 3)(x - 4)

Answer: 2x^2 - 5x - 12

Divide the polynomial by a monomial: x^3 + 4x^2 + 3x + 12 ÷ x + 3

Answer: x^2 + x + 4

Factor the polynomial: x^3 + 4x^2 + 3x + 12

Answer: (x + 3)(x^2 + x + 4)

Find the zeros (roots) of the polynomial: x^2 + 4x + 3 = 0

Answer: -1 and -3

G9 Polynomial Answer:

    Polynomial Identities and Asymptotic Methods A. Giambruno,Mikhail Zaicev,2005 This book gives a state of the art approach to the study of polynomial identities satisfied by a given algebra by combining methods of ring theory combinatorics and representation theory of groups with analysis The idea of applying analytical methods to the theory of polynomial identities appeared in the early 1970s and this approach has become one of the most powerful tools of the theory A PI algebra is any algebra satisfying at least one nontrivial polynomial identity This includes the polynomial rings in one or several variables the Grassmann algebra finite dimensional algebras and many other algebras occurring naturally in mathematics The core of the book is the proof that the sequence of co dimensions of any PI algebra has integral exponential growth the PI exponent of the algebra Later chapters further apply these results to subjects such as a characterization of varieties of algebras having polynomial growth and a classification of varieties that are minimal for a given exponent

    Combinatorics Daniel A. Marcus,1998-12-31 The format of this book is unique in that it combines features of a traditional text with those of a problem book The material is presented through a series of problems about 250 in all with connecting text this is supplemented by 250 additional problems suitable for homework assignment The problems are structured in order to introduce concepts in a logical order and in a thought provoking way The first four sections of the book deal with basic combinatorial entities the last four cover special counting methods Many applications to probability are included along the way Students from a wide range of backgrounds mathematics computer science or engineering will appreciate this appealing introduction   Program Catalog with Permuted Description Index for CDC Co-op Computers N.
