Electric and Plug-in Hybrid Vehicle Networks
 Emanuele Crisostomi, Robert Shorten, Sonja Stüdtli, Fabian Wirth, 2017-10-30
 This book explores the behavior of networks of electric and hybrid vehicles. The topics that are covered include energy management issues for aggregates of plug-in vehicles, the design of sharing systems to support electro-mobility, context awareness in the operation of electric and hybrid vehicles, and the role that this plays in a Smart City context, and tools to test and design massively large-scale networks of such vehicles. The book also introduces new and interesting control problems that are becoming prevalent in the EV/PHEV's context, as well as identifying some open questions. A particular focus of the book is on the opportunities afforded by networked actuation possibilities in electric and hybrid vehicles, and the role that such actuation may play in air quality and emissions management.

Control Strategies for Advanced Driver Assistance Systems and Autonomous Driving Functions Harald Waschl, Ilya Kolmanovskiy, Frank Willems, 2018-06-28 This book describes different methods that are relevant to the development and testing of control algorithms for advanced driver assistance systems (ADAS) and automated driving functions (ADF). These control algorithms need to respond safely, reliably and optimally in varying operating conditions. Also, vehicles have to comply with safety and emission legislation. The text describes how such control algorithms can be developed, tested and verified for use in real world driving situations. Owing to the complex interaction of vehicles with the environment and different traffic participants, an almost infinite number of possible scenarios and situations that need to be considered may exist. The book explains new methods to address this complexity with reference to human interaction, modelling various theoretical approaches to the definition of real world scenarios and with practically oriented examples and contributions to ensure
