Galileo Basic Manual:

The Essential Galileo John Gribbin, Mary Gribbin, 2014-04-01 Galileo Galilei 1564 1642 was the first scientist in the modern use of the term. Instead of relying on the works of Aristotle he actually carried out experiments to test theories. Legend has it that one of his experiments involved throwing weights off the Leaning Tower of Pisa. His astronomical observations with the telescope shattered the idea that the Earth was at the centre of the Universe and led to his trial for heresy. He had a great lust for life, three children by a woman he never married, a biting sarcasm with and the friendship of princes and in spite of his run in with Pope Urban VIII, cardinals. An introduction, afterword and clear chronological table place Galileo's work in the context of the development of scientific knowledge. **Galileo's Muse** Mark A. Peterson, 2011-10-17 Mark Peterson makes an extraordinary claim in this fascinating book focused around the life and thought of Galileo: it was the mathematics of Renaissance arts, not Renaissance sciences that became modern science. Painters, poets, musicians and architects brought about a scientific revolution that eluded the philosopher-scientists of the day.

Measurement, Modelling and Evaluation of Computing Systems Holger Hermanns, 2020-03-09 This book constitutes the proceedings of the 20th International GI/ITG Conference on Measurement, Modelling and Evaluation of Computing Systems MMB 2020 held in Saarbrücken, Germany in March 2020. The 16 full papers presented in this volume were carefully reviewed and selected from 32 submissions. They are dealing with scientific aspects of measurement, modelling and evaluation of intelligent systems including computer architectures, communication networks, distributed systems and software, autonomous systems, workflow systems, cyber physical systems and networks, Internet of Things as well as highly dependable, highly performant and highly secure systems. **Home Automation with Intel Galileo** Onur Dunder, 2015-03-30 This book is for anyone who wants to learn Intel Galileo for home automation and cross platform software development. No knowledge of programming with Intel Galileo is assumed, but knowledge of the C programming language is essential. **ICDT '90** Serge Abiteboul, 1990-12-03 The emergence of new paradigms for data management raises a variety of exciting challenges. An important goal of database theory is to answer these challenges by providing sound foundations for the development of the field. This volume contains the papers selected for the third International Conference on Database Theory ICDT 90. The conferences in this series are held biannually in beautiful European cities: Rome in 1986 and Bruges in 1988, with proceedings published as volumes 234 and 326 in the same series. ICDT 90 was organized in Paris by the Institut National de Recherche en Informatique et Automatique. The conference features 2 invited presentations and 31 papers selected from 129 submissions. The papers describe original ideas and new results on the foundations of databases, knowledge bases, object oriented databases, relational theory, transaction management, data structures and deductive databases. The volume offers a good overview of the state of the art and the current trends in database theory. It should be a valuable source of information for researchers interested in the field.
