the relevant materials for the interested readers The first part of this book contains an introductory background to the field The second part presents the EC approaches for analysis and reconstruction of GRN from gene expression data The third part of this book covers the contemporary advancements in the automatic construction of gene regulatory and reaction networks and gives direction and guidelines for future research Finally the last part of this book focuses on applications of GRNs with EC in other fields such as design engineering and robotics Provides a reference for current and future research in gene regulatory networks GRN using evolutionary computation EC Covers sub domains of GRN research using EC such as expression profile analysis reverse engineering GRN evolution applications Contains useful contents for courses in gene regulatory networks systems biology computational biology and synthetic biology Delivers state of the art research in genetic algorithms genetic programming and swarm intelligence Evolutionary Computation in Gene Regulatory Network Research is a reference for researchers and professionals in computer science systems biology and bioinformatics as well as upper undergraduate graduate and postgraduate students Hitoshi Iba is a Professor in the Department of Information and Communication Engineering Graduate School of Information Science and Technology at the University of Tokyo Tokyo Japan He is an Associate Editor of the IEEE Transactions on Evolutionary Computation and the journal of Genetic Programming and Evolvable Machines Nasimul Noman is a lecturer in the School of Electrical Engineering and Computer Science at the University of Newcastle NSW Australia From 2002 to 2012 he was a faculty member at the University of Dhaka Bangladesh Noman is an Editor of the BioMed Research International journal His research interests include computational biology synthetic biology and bioinformatics

**Growth and Diffusion Phenomena** Robert B. Banks, 2013-04-17 Diffusion and growth phenomena abound in the real world surrounding us Some examples growth of the world's population growth rates of humans public interest in news events growth and decline of central city populations pollution of rivers adoption of agricultural innovations and spreading of epidemics and migration of insects These and numerous other phenomena are illustrations of typical growth and diffusion problems confronted in many branches of the physical biological and social sciences as well as in various areas of agriculture business education engineering medicine and public health The book presents a large number of mathematical models to provide frameworks for the analysis and display of many of these The models developed and utilized commence with relatively simple exponential logistic and normal distribution functions Considerable attention is given to time dependent growth coefficients and carrying capacities The topics of discrete and distributed time delays spatial temporal diffusion and diffusion with reaction are examined Throughout the book there are a great many numerical examples In addition and most importantly there are more than 50 in depth illustrations of the application of a particular framework or model based on real world problems These examples provide the reader with an appreciation of the intrinsic nature of the phenomena involved They address mainly readers from the physical biological and social sciences as the only mathematical background assumed is elementary calculus Methods are developed as required and

the reader can thus acquire useful tools for planning analyzing designing and evaluating studies of growth transfer and diffusion phenomena The book draws on the author s own hands on experience in problems of environmental diffusion and dispersion as well as in technology transfer and innovation diffusion     Bacteriology Fred Wilbur Tanner,1933
