Haftka,Zafer Gürdal,2012-12-06

The field of structural optimization is still a relatively new field undergoing rapid changes in methods and focus Until recently there was a severe imbalance between the enormous amount of literature on the subject and the paucity of applications to practical design problems This imbalance is being gradually redressed There is still no shortage of new publications but there are also exciting applications of the methods of structural optimizations in the automotive aerospace civil engineering machine design and other engineering fields As a result of the growing pace of applications research into structural optimization methods is increasingly driven by real life problems t Jost engineers who design structures employ complex general purpose software packages for structural analysis Often they do not have any access to the source program and even more frequently they have only scant knowledge of the details of the structural analysis algorithms used in this software packages Therefore the major challenge faced by researchers in structural optimization is to develop methods that

are suitable for use with such software packages Another major challenge is the high computational cost associated with the analysis of many complex real life problems In many cases the engineer who has the task of designing a structure cannot afford to analyze it more than a handful of times      **Optimization in Industry** Ian Parmee, Prabhat Hajela, 2012-12-06

**Optimization in Industry** comprises a collection of papers presented at the third US United Engineering Foundation s Optimization in Industry Conference The main thrust of this the third conference of the series is related to engineering optimization including both manufacture and parametric design The papers included explore the relationships between well established deterministic optimization methods and the emerging stochastic and mainly population based search and optimization algorithms A mix of approaches across a wide range of engineering disciplines is included It illustrates the manner in which various techniques can be utilised either in a stand alone manner or within hybrid systems to give best performance in terms of optimal design and computational efficiency The papers span scientific application awareness information dissemination and industrial requirements areas They provide information on available search and optimization techniques and their application to specific design problems and across the field of manufacturing generally Papers identifying and dealing with problems of incorporating novel optimization techniques within day to day design practice and industrial software requirements are also included The book will thus be of interest to both the industrial and academic communities      *System Modeling and Optimization* F.
