

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [1] Circles are females and squares are males.
- [2] A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1-15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1-1?

These parents (1-1 and an color blind man (1-2) the had 4 children, but color blind males from his mother. Since the mother is not shaded she must be a carrier.

Number 1-4 is colorblind just like his father. Where could he get his allele for colorblindness?

Yes, he inherited his allele for colorblindness from his mother. Must have been that 1-2's wife was a carrier from their father.

Number numbers 1-5 and 1-6 were colorblind. How did they have a colorblind son (1-8)?

That mother must be a carrier for color blindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be X^bY and mother must have to be X^{bB} or X^{bb} .

If mother 1-1 has a normal son, what is the probability that their son will be colorblind?

X^BX^B or X^BX^b — all of their sons will be color blind.
 (normal)
 (carrier)
