Literacy Work in the Reign of Human Capital Evan Watkins, 2015-07-01 In recent years a number of books in the field of literacy research have addressed the experiences of literacy users or the multiple processes of learning literacy skills in a rapidly changing technological environment In contrast to these studies this book addresses the subjects of literacy In other words it is about how literacy workers are subjected to the relations between new forms of labor and the concept of human capital as a dominant economic structure in the United States It is about how literacies become forms of value producing labor in everyday life both within and beyond the workplace itself As Evan Watkins shows apprehending the meaning of literacy work requires an understanding of how literacies have changed in relation to not only technology but also to labor capital and economics The emergence of new literacies has produced considerable debate over basic definitions as well as the complexities of gain and loss At the same time the visibility of these debates between advocates of old versus new literacies has obscured the development of more fundamental changes Most significantly Watkins argues it is no longer possible to represent human capital solely as the kind of long term resource that Gary Becker and other neoclassical economists have defined Like corporate inventory and business management practices human capital labor now also appears in a just in time form as if a power of action on the occasion rather than a capital asset in reserve Just in time human capital valorizes the expansion of choice but it depends absolutely on the invisible literacy work consigned to the peripheries of concentrated human capital In an economy wherein peoples attention begins to eclipse information as a primary commodity a small number of choices appear with an immensely magnified intensity while most others disappear entirely As Literacy Work in the Reign of Human Capital deftly illustrates the concentration of human labor in the digital age reinforces and extends a class division of winners on the inside of technological innovation and losers everywhere else
