

GENSET COMMUNICATIONS MODULE (A41)

The genset communications module (GCM) is required to connect the PCC to a PowerCommand (LonWorks) network, and communicate with other network modules. The GCM module is an optional feature, and it is available as a field upgrade kit for applications where the feature must be added in the field. The PCC must be operating with firmware version 1.06 or later. For model DFH gensets only, firmware must be version 1.04 or later.)

The GCM provides an interface for data transfer between the PowerCommand control and other modules on the network. It communicates with the PCC through a serial port on the PCC, as well as monitoring various PCC inputs to determine the operating state of the control. For example, the GCM monitors

PCC data such as voltage, oil pressure, current, engine speed, and not in auto status; and provides that information to the network.

The GCM also facilitates remote monitoring and limited remote control of the genset that PCC controls. Outputs from the GCM can 'wake up' the PCC when needed, or issue start commands to the genset. The GCM also includes a terminate circuit for use at the end of a network data bus.

The GCM module is powered from the genset starting batteries. It is operational at all times when powered, even if the PCC is asleep.

The GCM module is mounted on stand-off mounting legs above the analog board (A33).

Refer to the Power Command Network Installation and Operator's Manual (900-0366) for information on installation and use of the GCM module.
